### TERMS

All bills are subject to 2 per cent discount within 10 days from invoice date. Sixty days net. Sight draft, plus interest thereafter.

Shipments are forwarded by best carrier, in our judgement, at time of delivery, unless otherwise specified by customer.

First-class stock is carefully packed when shipment is made, and we hold good order receipt from the transportation company. Our responsibility ceases thereafter. If the stock reaches you in bad condition, notify agent and bring claim against the delivery company for damage by their negligence, as no allowance for this cause can or will be made by us.

All items in this list are offered subject to crop deliveries or failures, and being unsold on receipt of order, and other conditions beyond our control, and ALL PRICES ARE SUBJECT TO CHANGE WITHOUT NOTICE.

Bulbs, whether shipped on arrival or placed in cold storage for later delivery, may be examined at time of arrival if desired, but no claims will be entertained at a later date. As to all items other than bulbs, claims must be made within five days after receipt or they cannot be recognized.

In the interest of time saving, we ask that you authorize us, when necessary, to substitute with the nearest similar size or variety.

Discounts for cash with order, applying on orders from \$5.00 up.

Bulbs, plants, supplies, 3%.

Flower seeds, 5%. (8% on orders \$25.00 or over). Cyclamen, Grass and Vegetable seeds, and Fertilizers, Net. No C.O.D.'s.

New accounts desiring credit, please give three trade references.

The prices in this catalog except on Flower Seeds Are not Pre-paid. Please include sufficient postage with cash orders. Postage will be billed on Charge Orders.

**Disclaimer.** While we, S. S. Skidelsky & Co., Inc. exercise the greatest care to have all seeds pure and reliable, and all bulbs, plants and cuttings true to name, we do not give any warranty, express or implied, and will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms they must be returned at once and the money will be refunded. Our liability in all instances, is limited to the purchase price of the seeds, bulbs, roots or plants.

SINCE 1897 WE HAVE SERVED THE WHOLESALE TRADE WITH ONLY THE BEST IN BULBS, PLANTS, SEEDS, SUPPLIES.

## HARDY LILIES

### Sunburst Lilies

Crossing the tall, Chinese *L. henryi*, with nodding and recurved orange flowers, with the best of the trumpet lilies, a race of plants was raised, ranging from the pure trumpet type to some that showed broad-petaled flat flowers, all in new colors. The SUNBURST strain was among the loveliest of these new hybrids, in a color range from white through golden-yellow to deep orange. These Lilies are unsurpassed for garden decoration, cutting and for use as corsage flowers.

All Lilies will be shipped when ready, beginning October first and earliest shipments will go to those who *must* have early delivery. Otherwise all orders will be filled strictly in rotation, as received.

SUNBURST STRAIN

BELLINGHAM HYBRIDS MIXED

### Bellingham Hybrids

L. PARDALINUM SUNSET

Created by the late Dr. David Griffiths of the U.S.D.A., these magnificent hybrids are the result of crossing various native American lilies. From them they inherit strength. They are now dependable garden plants—tall, free-flowering, scented and beautifully colored. We also recommend the lovely *L. pardalinum giganteum*, the SUNSET lily, a glorious, truly American garden plant that should be more widely grown.

### Royal Gold

THE GOLDEN REGAL LILY

The true-breeding, golden-yellow REGAL lily, a truly magnificent, early-flowering novelty that should be in every garden. Hybrid vigor makes this an easy-to-grow plant. Highly disease-resistant, tall and very free-flowering, it will stand out and be the center of attention long before other trumpet Lilies flower. Plant among blue Delphinium, give it a well-drained position and good soil and it will thrive and flower magnificently and increase in number from year to year.

Jan de Graaff  
LILIES

RED BAND STRAIN

## Oriental Lilies

These lovely, exotic, yet hardy Lilies from the mountain slopes of Japan grow there in volcanic ash with perfect drainage. Give them similar conditions, good soil and drainage and they will thrive for you. Here we offer you the finest of all, the true GOLD BAND LILY in its strongest form—*L. auratum platyphyllum*, from stock raised from seed and acclimated in Oregon. Among the thousands of Lilies so raised a few show up with purest white flowers offset by the gold band. We offer them as *L. auratum virginale*—loveliest of all. Still more rare are the seedlings in which a crimson-red band replaces the gold. This exceedingly beautiful group is offered as the RED BAND strain. Another spectacular lily from Japan is *L. speciosum* of which the RED CHAMPION strain is shown. A late flowering, hardy and dependable plant.

JILLIAN WALLACE is the first of the hybrids between *L. auratum* and *L. speciosum*. It has true hybrid vigor and hardiness. The crimson-red coloring makes this new garden plant unique.

JILLIAN WALLACE

L. AURATUM VIRGINALE

L. AURATUM PLATYPHYLLUM

RED CHAMPION STRAIN

FIESTA MIXED COLORS

CITRONELLA STRAIN

## Fiesta Hybrid Lilies

FIESTA HYBRID LILIES were raised from wild plants of the Chinese mainland. They are therefore fully hardy. The glorious blend of all colors, present in this new strain, makes them ideal for cutting and garden use. The new CITRONELLA strain contains nothing but pure, strong-growing yellows. Planted in full sun, with good soils and perfect drainage, these Lilies will multiply rapidly and form beautiful large clumps.

## Wild Lilies

WILD LILIES, the species from which all hybrids are derived, are found all over the Northern Hemisphere. The colors range from pure white, through soft lilac, as in the lovely *L. lankongense* illustrated, to orange and lacquer-red. These Lilies are easy to grow.

We guarantee all Lilies to be true to name, top quality, free from pests and diseases and to reach you in a live and healthy condition. If for any reason you are not completely satisfied, please notify us promptly.

L. LANKONGENSE

## Olympic Hybrids

OLYMPIC HYBRIDS—the finest strain of trumpet lilies available. These plants are the result of crosses made between wild Lilies found in the cold and dry plains and mountains of Central China. With hybrid vigor, great hardiness and a beauty that is unsurpassed, they are an asset to any garden.

From among these hybrid Lilies, as they are grown in Oregon, the OLYMPIC, HEART'S DESIRE, and the BLACK DRAGON strains have been chosen and these novelties are now being offered for garden and exhibition use. From this strain too the lovely PINK PERFECTION was developed—a group of Lilies of deep and wonderful coloring enthusiastically received here and abroad.

HEART'S DESIRE STRAIN

NEW STRAIN OLYMPIC HYBRIDS

BLACK DRAGON STRAIN

GOLDEN CLARION STRAIN

## New Trumpet Lilies

### HYBRIDS & STRAINS

Four examples of the exciting new trumpet Lilies now available. All of them are vigorous and dependable garden plants that need no more than a well-drained, sunny garden spot and a reasonably good soil.

The BLACK DRAGON strain is of pure trumpet lily origin, selected for its unusual coloring, size, vigor.

The GOLDEN CLARION strain is of hybrid origin. The orange, nodding, Chinese *L. henryi*, crossed with fine trumpet lilies, produced these lovely golden yellows.

The EMERALD strain derives its soft jade-green coloring from a rare trumpet lily; its strength from *L. henryi*. It is vigorous, hardy and very beautiful.

The PINK PERFECTION strain had its origin in a mutation, strengthened by careful breeding. The fine color will show at its best when this strain is planted in light shade.

EMERALD STRAIN

PINK PERFECTION STRAIN

MID-CENTURY HYBRIDS MIXED

## Mid-Century Hybrids

Combining the true Tiger lily with the handsome, short upright-flowering lilies originating in Japan and China, a new, disease-resistant, hybrid strain of garden lilies was developed with all the beauty and hardiness of its parents and a range of colors and forms never before seen in Lilies.

MID-CENTURY HYBRIDS MIXED is a strain of Lilies that will grow anywhere, so long as decent garden soil, sunny location and good drainage are provided. The strain multiplies rapidly from underground bulbets.

PROSPERITY shows a color new in garden lilies. This is a wonderful plant that will thrive under average conditions; a long-lasting flower and a beauty in the herbaceous border.

ENCHANTMENT, winner of numerous awards, is America's most famous hybrid lily. It will grow anywhere as long as some sun and a bit of well-drained soil are available. (United States Plant Patent #862)

These glorious Lilies were grown for you in Oregon, on the slopes of lovely Mount Hood. On them every care and attention has been lavished so that they will thrive for you in your own garden and will bloom next year and for years to come in all their glory. The bulbs will be shipped as living plants, with their full root-system intact, carefully packed with damp peatmoss in polyethylene bags—each variety and lot labeled as to name and type.

ENCHANTMENT

### the New Book of LILIES

by Jan de Graaff—Superbly illustrated in natural colors, this book sums up some twenty years' experience with lilies, their commercial production, their history and their uses in the garden. An authentic and delightful book on this loveliest of all flowers. Where they come from, companion plants, basic culture, pests and diseases and what to do about them, how to grow lilies, reference charts, blooming dates, etc., etc. Order direct from us.

Per copy, postpaid \$3.50

# GENERAL HINTS ON FORCING BULBS

The bulb is a storehouse of food that supports the growth of the plant and flower. Plump solid bulbs are the results of good growing practices in the field. When you receive your SSS bulbs, handle them properly for best satisfaction.

Each type of bulb has certain specific storage and forcing requirements, which are described along with the listing of varieties, but there are some general hints for all kinds.

1. **When bulbs arrive** — Unpack at once. Most bulbs arrive in the fall. The bulbs have been grown in the field, given the proper treatment after harvest and then sent to you, the cut flower and potted plant producer. "Prepared" or "precooled" bulbs should be planted immediately upon arrival.

2. **Storage** — If you can't plant the bulbs right away, put them in cool storage at 48-50°. Hyacinths keep better at 55°. Long holding of lilies requires a lower temperature, down around 31-32°. Callas, tuberous begonias, tuberoses and coladiums are not true bulbs; do not store them cold.

3. **Planting** — Soak pots thoroughly before using. Plant all bulbs before it gets very cold out of doors. After planting, soak the soil well. Good root action needs good drainage. Use some coarse gravel in the bottom of pots. Flats should have open cracks. The soil should have good structure. For heavy soils, add some sand and peat. Use a soil low in fertility. Do not use old mum soils which often have too much nutrients which delay root formation. A soil test will give you the answer.

4. **Cold storage treatment** — The object of cold storage is to have the bulbs develop a good root system before the top of the plant grows. Of equal importance are the chemical changes taking place inside the bulb. Chemical growth processes are in action! In many types of bulbs the flower bud is slowly developing and pushing up toward the top of the bulb during storage.

a. **Indoor Storage:** A bulb cellar or special storage building makes it easy to get out bulb stock at times when material out of doors is frozen in the ground. It is easier to maintain uniform temperatures in this type cold storage than out door burying.

b. **Outdoor Storage** The soil under the flats and pots should have good drainage; excessive wetness prevents good rooting. Put a layer of gravel under the flats and pots. When the flats and pots are set in place, soak them thoroughly. Then cover with a 1 to 2 inch layer of sand, and then 6 to 12 inches of soil. The sand separates the soil from the pots and flats making them easier to remove.

In cold weather, don't put out more than you can cover by the end of the day. Put in good strong stake labels so you can find the various lots when you want them for forcing. Make a chart. Put varieties outside, in reverse order of forcing so you don't have to dig all over the storage area when you dig out the bulbs.

After the upper part of the covering soil has frozen, cover with a deep layer (10-12 inches) of salt hay, wood shavings, sawdust, or other insulating materials to keep the soil from thawing, and to keep the frost from penetrating deeper where the low temperatures will slow down rooting of the bulbs.

Rodents may nest in the hay and shavings, and eat bulbs, especially tulips. A dusting with Tonacide or some similar naphthalene material, or sulphur, before covering helps prevent rodent damage.

If the ground is frozen too solidly when you want to get out the flats, lay an electric heating cable on the ground and cover it with aluminum foil and a tarpaulin to thaw out the soil, or use a load of hot sand dumped on the ground and covered with a tarp.

5. **Forcing** — Bulbs should be well rooted when brought into the greenhouse. Don't let the bulbs freeze while digging, and moving into the greenhouse. Actual forcing conditions are given on subsequent pages for each type of bulb. Have the thermometer at plant level. Differences of as much as 5 to 7 degrees on thermometers at different heights show why different growers sometimes get different results when supposedly using the same greenhouse temperature.

The greenhouse temperatures recommended for each crop are night temperatures with day temperatures 8 to 15 degrees higher depending on whether the day is bright or cloudy. Raising temperatures speeds up growth but often reduces quality.

The rapidity of forcing is governed by the stage of development when brought into the warm greenhouse.

6. **Watering** — Keep the soil moist all the time for best growth; keeping soil slightly on the dry side can help keep the potted plants from growing too tall.

Good drainage of the flats or pots, and soil with good structure prevents excessively wet soil which hinders root action.

Avoid watering hyacinths for 2 or 3 days after bringing into the greenhouse. There is some feeling that this helps prevent "spitting" of the flower bud.

Have foliage dry at night; water in the morning. This reduces high humidity which favors the disease botrytis (petal rot or water neck).

7. **Finishing Pot for Sale** — Short sturdy plants do not need support. High temperatures, and poor light tend to produce leggy, weak stems. Staking plants costs money and reduces profits.

A little grass seed (red top is good) sown between the bulbs three weeks before finishing will dress up the pots with a green mat, and gives that added touch of quality.

8. **Care of Potted Plants** — When you have a good product, don't ruin it with poor handling. Paper sleeves are a real labor-saver.

9. **Care of Cut Flowers** — A good product is worthy of careful handling. A parchment sleeve with your name on it protects your flowers and advertises the product as being yours.

\*Varieties recommended for forcing.

## TULIPS FOR FORCING

### 1. Planting

**a. Cut flowers** — Fill flats (4 inches depth) with soil and press bulbs into the soil. **OR**, you can put in 2 inches of soil, then the bulbs, and then fill flat with soil. Space them with the bulbs barely touching.

**b. Potted Plants** — Pot bulbs of 11-12 cm. or larger with 6 to 8 bulbs in a 6 inch pan, 8 to 9 bulbs in a 7 inch pan, or 11 to 12 bulbs in a 8 inch pan. Place flat side of bulbs to outside of the pot, causing the first leaf to cover the side of the pot. Loose soil is generally put in the pans, and the bulbs are pressed down until the nose of the bulb is barely visible.

**2. Storage Temperature** — Storage at 48-50° is recommended. If you can't plant right away, hold the bulbs at 45°F. Pre-cooled bulbs lose the value of pre-cooling if buried out of doors in a warm fall.

**3. Time of forcing** — Pre-cooled bulbs have been given special cold treatment and can be forced for cut flowers a couple weeks earlier than regular bulbs. The date of earliest forcing of regular bulbs is given under the variety listing assuming the bulbs have been planted when received and stored at 48-50°F.

For the Darwin type, figure about 5 - 6 weeks to flower bulbs brought out of the 48-50°F. storage in December; 4 - 5 weeks in January; 3 - 4 weeks for bulbs brought out in February and early March; and 3 weeks for bulbs forced in late March and early April. Triumphs ordinarily take a week less.

The stage of development when removed from storage influences the time required for flowering. Usually sprouts are just showing when forcing is started. Most bulbs are forced in greenhouses. Research has shown that good flowers can be produced under standard white fluorescent lights in a room or basement.

**4. Light** — Some Triumph tulips have been forced in two weeks using three hours of supplementary artificial light in the greenhouse every night.

**5. Shading** — For early forcing, covering plants for the first week will lengthen the stems. A light shade of cloth (paper is sometimes used) for a few days prevents "burning" of the stems by intense sun.

**6. Temperature for forcing** — Start plants at 55°F night temperature for about a week, and then move them to 60°. If only one temperature is available, use 60°.

Higher night temperatures, especially in cloudy weather, cause tall, weak stemmed, undesirable plants. Keep day temperatures 8 to 15 degrees higher depending on weather.

Some growers start the bulbs under benches in a 60° greenhouse, because at the ground level the temperature will be about 55° (unless there are heat pipes under the benches.) Then a week or so later, the flats and pots are put on the bench where the temperature will be 60°. This is a space saving procedure.

**7. Disease control** — To prevent botrytis disease ("fire"), spray foliage with Ferbam or Captan (1 lb. to 100 gallons of water) when leaves are 2 to 3 inches tall, and repeat every 5 to 7 days. Keep foliage and flowers dry. Prevent high humidity in greenhouse.

**8. Cutting flowers** — Cut when ready to open. Flowers keep best at 32-35°F. Stems elongate in storage at higher temperatures..

## PAPER WHITES

1. Avoid cold storage. For late forcing, plant and keep at 50-55°F.
2. Bulbs in soil or pebbles and grown at 55-65° flower in about 6 weeks in winter and 3 weeks in spring.

HYACINTH DELFTS BLUE

## HYACINTHS WHITE

- \*Carnegie. Pure white, large compact truss on short stem.
- \*Edelweiss. Pure white, broad truss, large bells.
- \*L'Innocence. Pure white, most popular of all whites.

## RED, PINK AND ROSE SHADES

- \*Anne Marie. Delicate pink, strong stem, large bells.
- \*Gertrude. Rich rose, with deeper stripe down center of petal.
- \*Jan. Bos. Deep scarlet, lighter centered bells, early forcer.
- \*Lady Derby. Light rose-pink, fine large spike.
- \*La Victoire. Bright deep rosy crimson; close truss; fine form.
- \*Marconi. Cerise pink dense bold spike, good form.
- \*Pink Pearl. Rose pink, heavy spike, large bells, early forcer.
- \*Princess Margaret. Delicate pink, long spike.
- \*Queen of the Pinks. Bright cerise pink. Fine compact spike, good form.

## BLUE AND LAVENDER SHADES

- \*Bismark. Light sky-blue, very large truss. Excellent for early forcing.
- \*Delft's Blue. Bright porcelain blue, compact spike.
- \*Dr. Lieber. Dark porcelain-blue with lilac tinge.
- \*Dr. Stresemann. Sky blue, broad well shaped truss.
- \*Grand Maître. Vivid mid-blue, good spike, very attractive.
- \*King of the Blues. Bright blue, fine spike, good form.
- \*Myosotis. Medium light - lavender blue.
- \*Perle Brilliant. Light blue, large well formed truss.
- \*Queen of the Blues. Cambridge blue, long truss, large bell.

## YELLOW

- \*City of Haarlem. Bright yellow; fine large truss; suitable for bedding and forcing.

14/15 (Miniature) .....	7.25	62.00

\*Varieties recommended for forcing.

## HYACINTHS

**1. Planting** — Use one bulb per 4 inch pot or 3 bulbs per 6 inch pot with top of bulb just above the surface of the soil.

**2. Forcing** — For February and early March flowering, potted bulbs are stored at 54-55°F. until the "nose" is 1½ inches high, and then forced at 65-70°F. until color shows, and then reduced to 50-55° for improvement of keeping quality.

For late March and April, the potted bulbs can be held in a 50° storage until a week or two before Easter. Protect from bright sun right after storage.

**3. "Loose-bud"** — This trouble, sometimes called "toppling" or "spitting", is a tumbling out of the flower head of the hyacinth shortly before flowering time. Dutch research indicates several possible causes of the trouble, especially too early root development; and suggests storing bulbs at 78°F until planting time, planting late (after October 15) and not too deeply, and providing good drainage in the location where the potted bulbs are stored.

## PREPARED HYACINTHS FOR CHRISTMAS

Especially treated for early flowering.

Pot immediately on arrival. Keep cool and dark for ten days. Bring into greenhouse at 55 degrees. After two days, raise temperature to 75. When sprout is four inches long, place in part shade in the greenhouse.

In warmer areas DO NOT bring into greenhouse until mid-December. BULBS MUST BE WELL ROOTED BEFORE FORCING.

## FRENCH ROMAN HYACINTHS

"Romans" are invaluable for early pot and bowl work. Can easily be brought in flower for Christmas and later.

<b>Verger.</b> Pure white perianth, deep red cup. Can be forced from Jan. 25th .....	9.50	85.00

\*American Grown.

## NARCISSUS FOR FORCING

The two main types for forcing are the daffodils, and paper whites.

### DAFFODILS

**1. Planting** — Use flats 4 inches deep, or "azalea" pots. Fill 2/3 full with soil, set bulbs close together, and then add more soil. Soak the soil.

**2. Storage** — A minimum of 10 weeks at 45-50°F is needed. Do not force daffodils unless the flower bud is up in the neck of the bulb.

### 3. Time of forcing

a. For Christmas and early January — plant precooled bulbs immediately when received and store at 48-50°F until forced in a 60°F greenhouse. Figure 4 to 5 weeks for flowering. Do not expose pre-cooled bulbs to warm temperatures before planting.

b. For plantings to be flowered after January 15, pre-cooled bulbs are not needed if you plant the regular bulbs and store at least 10 weeks at 45-50°. Then put in 60° greenhouse. Figure 3 to 4 weeks for flowering in latter January and early February. A 55° temperature requires a little longer than 60°.

March flowering requires 2 1/2 to 3 weeks in a 60° greenhouse, and late March and April crops often require only 2 to 2 1/2 weeks.

Give pot plants full sunlight. For cut flowers, shade the plants for several days when first brought into greenhouse, then full sunlight.

If buds are not up in the neck of the bulb, grow at 50° until the buds are out of the bulbs and then force at 55 to 60°F.

**4. Cutting flowers** — A sticky juice or sap drips from the cut ends of the daffodils. Beware. This sap falling on some plants "burns" the leaves.

## Narcissus for the Garden

For that beautiful, natural, "woody" effect — throw handfuls of SSS #1. Mixed for Naturalizing into the area to be planted. Bury the bulbs where they land, 6 inches below the surface. Various varieties in the mixture bloom at different times, giving a longer blooming period over all.

### MIXTURE

"SSS" Blue Diamond Mixed. Contains many varieties of all types especially blended for naturalizing

Per 100 Per 1000

6.50 55.00

### DOUBLE

Double Nosed No. 1  
Per 100 Per 1000

**Cheerfulness.** Double white Poetaz, good stem, a fine show variety ..... 8.50 75.00

**Inglescombe.** One of the finest of all double Daffodils. Bright sulphur yellow, uniform in color throughout; flowers of perfect form, very large, on stiff erect stems ..... 10.00 90.00

**Mary Copeland.** Pure white perianth with intense bright scarlet center ..... 11.00 100.00

**\*Texas.** Huge double flower. Outer and inside petals bright yellow, bright orange center. Can be forced after Jan. 20th ..... 10.00 90.00

**Twink.** Petals alternating, soft primrose and clear orange. Forces easily, free flowering and hardy ..... 10.00 90.00

Double Nosed No. 1  
Per 100 Per 1000

**Cheerfulness.** See Double Narcissus for description ..... 8.50 75.00

**Cragford.** Cream-white perianth, dark orange cup. Can be forced from Dec. 10th ..... 10.50 95.00

**Early Perfection.** The earliest of all Poetaz. Six to eight flowers per stem. Can be forced to bloom in early January. Pure white perianth, clear, white cup ..... 9.00 80.00

**Geranium.** Large pure white perianth, cup deep orange red. Medium late. Can be forced after Feb. 1st ..... 8.50 75.00

**Laurens Koster.** White perianth, orange cup. Free flowering. Blooms in two weeks from Jan. 15th ..... 8.50 75.00

**L'Innocence.** Large flowered pure white wavy perianth, large bright canary yellow cup; averaging 5 flowers on a stem; one of the best whites ..... 8.50 75.00

**La Fiancee.** Medium large. Perianth white, light orange cup. Medium early. Can be forced after Jan. 1st ..... 9.00 80.00

**Scarlet Gem.** Deep golden yellow perianth brilliant red cup. Medium late. Can be forced after Jan. 15th ..... 9.00 80.00

**St. Agnes.** Creamy white perianth, bright orange cup. Medium early. Can be forced after Jan. 10th ..... 8.50 75.00

**Yellow Cheerfulness.** See Double Narcissus for description. .... 9.00 80.00

### POETICUS

**Actea.** Large, flat, overlapping pure white perianth, with yellow eye, broadly margined scarlet. A most beautiful exhibition flower and the largest and best Poeticus ..... 9.00 80.00

**Sarchedon.** Pure white perianth, yellow eye with broad red edge. Medium early. Can be forced after Jan. 25th ..... 9.00 80.00

TEXAS (DOUBLE)

\*American Grown.

## HANDLING EASTER LILIES

1. **Soil** — Maximum Root growth requires good soil structure and good drainage. A mixture of equal parts of soil, peat moss, and sand drains well. Use 1/2 - 3/4 inch of broken crock or gravel in the bottom of the pot.

Use a soil of medium nutrient level with pH 6.5 to 7.0. If too low, add ground limestone. "Sterilize" soil to eliminate weeds and disease, and sterilize gravel and/or cinders on which the pots are to be placed on the bench.

2. **Treating bulbs** — Results of research with various bulb and soil treatments have varied greatly. Growers wishing to treat lily bulbs should soak the bulbs for 30 minutes in a suspension of 25 ounces of Terraclor and 25 ounces of Fermate in 50 gallons of water.

3. **Potting** — Pot the bulbs deep enough that top of bulb is 1 1/2-2 inches below soil surface. This stimulates stem roots which develop larger flowers and also support the plant. Use 5 1/2" pots for 7-8 and 8-9 inch bulbs and 6 inch pots for 9-10 and larger bulbs.

4. **Time of Potting** — The schedule given above assumes you are potting SSS bulbs which are properly pre-cooled. Pre-cooling of bulbs "breaks" dormancy giving quicker and more uniform growth. Plant bulbs immediately upon arrival or store at 32-40°.

5. **Sorting plants** — Since lily plants do not all grow at the same rate, and temperatures vary from place to place in a greenhouse, sort the plants putting slower ones in a warmer location to speed them up and faster plants in cooler locations. Sort plants in mid-January, and again in late February.

6. **Moisture** — Keep the soil moist for good root action. Lilies form flower buds when shoots are 2 to 3 inches tall. Later the plants can be run slightly dry to help decrease height **but don't overdo it.**

7. **Fertilizer** — Growers having good results should follow their regular practices.

Research has shown that the most important nutrient is nitrogen. When plants are 3-4 inches tall, start fertilizing every 14-18 days giving the soil a good watering with a fertilizer solution of sodium or calcium nitrate (1 pound per 40 gallons of water).

If the pH rises to 7.4, use an application or two of ammonium sulphate. Some growers with an initial soil pH of 6.5-7.0 use a neutral mixture of 12 ounces of nitrate of soda and 3 ounces of ammonium sulphate per 40 gallons, since this mixture causes very little change in pH.

Continue fertilizer applications until flower buds are 2 inches long to prevent leaf scorch in late stages of growth.

Growers who want to use a complete fertilizer should use the Easter lily or Nitrogen special (page 60).

8. **Temperature** — Sixty degrees at night and 70-75° in daytime are standard. Growth is faster as temperature is raised, but forcing at higher than 60° night temperature tends to stretch plants and blast buds.

Don't rush to have plants in bloom too early; growth will be rapid in the clear warm days of April 1960.

9. **Storage of flowering plants** — Just as the first flower is ready to crack at the tip, plants can be stored in a 38-40° refrigerated room for 10-14 days without light. The first flower will be in full bloom one day after removal from refrigerator. Keep soil moist. **Be sure temperature is 38-40°.**

10. **Lights** — Lights speed up growth, only if greenhouse temperatures are below 65°. Extra heat to speed up growth is preferred to lights which cause excessive stretching.

## BEWARE — Bargain Lilies

Several growers reported extremely poor results with bargain lots of Easter lilies during the past forcing season. Although the bulbs were received and planted in time to make Easter, the growth of the plants was extremely slow and few if any of the plants flowered in time for the Easter holiday. Forcing with high temperatures did not bring the plants in on time.

After sprouting, the shoots assumed a rosette habit of growth and failed to elongate properly. Many of the plants did not grow taller than 6-8 inches. It was the opinion of the research and extension personnel who examined the plants that these bargain bulbs had not been pre-cooled properly. The habit of growth and the delay in flowering were similar to the growth of un-cooled bulbs.

Purchase your Easter bulbs from a reliable distributor — one who does a careful job of pre-cooling the bulbs, shipping them to you promptly, and one who stands behind his product.

(Pennsylvania Flower Growers Bulletin June 1959)

Cleanliness and health of bulbs comes first with SSS & Co. Ruthless rogueing is done in the fields to insure true type and uniform growth. Harvesting bulbs is done only when they are properly ripened. Delivered with roots to assure a better start. Properly pre-cooled to facilitate timing.

**History has proven that SSS gives  
top value for your \$\$\$.**

## HANDLING EASTER LILIES (Continued)

**11. Leaf Scorch** — Tip burn of leaves can be caused by nicotine fumigation or spray, or by nutritional imbalance. The exact nutritional cause is not known; the p H of the soil should be 6.5 to 7.0, and nitrogen fertilizer supplied regularly. Avoid fertilizers with a high phosphorus ratio. Use a 1-1-1 ratio such as 20-20-20 or high nitrogen fertilizer such as a 16-4-12 complete soluble fertilizer.

Fertilizer programs vary with the composition of the potting soil and growers practices. Growers should continue fertilizer practices which have given good results.

**12. Bud count** — Large bulbs tend to have a higher bud count than small bulbs. Handle bulbs carefully; removal of bulb scales reduces bud count.

Bud count is seriously affected by light intensity. Space plants so leaves barely touch. Avoid houses with dirty glass or shaded by buildings.

**13. Height** — Adequate spacing on the bench in clear houses helps prevent stretching. Running plants on the dry side helps shorten lilies **but don't overdo it**, especially before the plants are 6 inches tall. This is when flower buds are forming.

Fertilizing does **not** stretch lilies. Research has shown fertilized lilies to be shorter than unfertilized plants.

High temperatures stretch lilies. Give more time and use recommended temperatures to prevent stretching.

**14. Loss of lower foliage** — Due to lack of light because of crowding, running the soil too dry, and lack of sufficient nitrogen.

**15. Splitting** — An infestation of aphids, especially when buds are very small, is sure to cause splitting.

**16. Blasted buds** — Plants held in a cold greenhouse may have blasted buds if the sun hits them in the morning while the soil is cold. Give a light shade or water with warm water early in the morning. General poor growing conditions such as inadequate light, root injury by excess fertilizer, improper watering and disease, or poor root growth may all cause blasting.

**17. Care of plants** — Removal of anthers before pollen is shed gives a clear white lily; check over the plants each day. Wrap carefully for shipping to avoid bruising the large trumpets. The consumer wants a perfect, not a battered, plant. If necessary to clean blooms, remove pollen with DRY cotton.

## LILIES FOR CUT FLOWERS

Grow cut flower lilies about the same as pot plants. Plant in 4 inch or deeper flats, or directly in a bench at a 4 by 5 inch spacing. Since the production schedule is spaced throughout the season, make new plantings at 2 week intervals. Since bulbs are held in a 32-34° storage, frequent deliveries are more practical than your holding them. Let SSS store the bulbs for you.

**Varieties** — Various types such as the new SSS longiflorum Supreme, Estate Lily, Floridii, Georgia Belle, Erabu and Giganteum all are good cut flower lilies, and react similar to regular Easter lilies, except that plants are usually taller.

**Other types** — Speciosum types and auratum lily bulbs are planted in November and grown at 60° with flowering for an April Easter. December plantings flower in May and June. Successive planting through August will give successive crops of cut flowers.

Splitting of lily flowers — caused by aphids when buds were small.

### SATISFIED CUSTOMERS REPORT:

**1929** The Erabu we bought from you last year produced the best Lilies we have ever seen. One plant bore forty-two flowers, the largest we have ever heard of, and over half the case averaged more than 10 flowers. We did not lose one bulb in the case. Lest you forget these were 7/9's.

Rowden & Mitchell  
Wallingford, Conn.

**1945** For 23 years you have had a standing order for our supply of Lily bulbs. We have had excellent results all these years and have no desire to change, so duplicate the order as usual. Let me say that last Easter a great many Lilies ran tall and had to be staked, while ours were short and required no staking. Can say you have to go some to beat the quality of the bulbs supplied by your firm.

L. W. Acheson  
Pittsfield, Mass.

**1950** Our Easter Lilies bought from you came in just right and are nice stock, just the right height for pot plants. Have about 200 left out of 3500 with two days to go.

A. Rasmussen & Son  
New Albany, Ind.

**1951** Many florist comment on the consistently good quality of our lilies. Wish to say that no matter how good a grower you are, you cannot get good flowers unless the bulbs are right in the first place. Have had bulbs from you for a long time and all blooms were of exceptionally large size. We did not find a single diseased bulb in the entire lot.

Baums House of  
Flowers, Inc.  
Knoxville, Tenn.

**1955** Having grown your Croft Lilies exclusively for the past 12 yrs. with excellent results, I wish to say that our Crofts this past Easter were the best we ever had, with the highest bud count also.

The winter this year was extremely severe even down here, but we finished all our Crofts in ample time for Easter. It was a pleasure to fill our Easter orders with such fine lilies, with a heavy bloom count.

Gus Borg's Flowers  
Decatur, Ga.

**1957** Your lilies did very well for us. One of the 7/8 Crofts threw 14 buds of which 12 developed. Many of them produced 8 or more. You may book our order again.

Hopkins the Florist  
Brattleboro, Vt.

**1958** (In connection with one particular bulb)

—"This Lily had 28 blossoms in all; 24 in bloom at one time in the shape of a crown". All Lilies were very satisfactory.

Caldwell Greenhouses  
Bradford, N. H.

**1959** We were pleased with the high quality Ace Lilies supplied by you. Your bulbs forced easy, gave an excellent bud count and were just the right height.

As a matter of fact, over the years your bulbs have always given better than average performance.

Norberg & Haroian, Inc.,  
Lexington, Mass.

## LILIES FOR FORCING

Easter in 1960 is April 17

Timing schedule for pre-cooled Croft lilies for Easter pots, 1960

— A problem will be rapid development in April when it will be hard to keep the greenhouse cool.

Dates are approximate for the northern half of the United States. Since weather conditions greatly affect growth, the grower has to adjust accordingly throughout the season.

Ace lilies usually take about 10 - 15 days longer than Croft.

Date	Days to Easter	Remarks
Dec. 21, 1959	118	Pot and hold at 55°
Jan. 11, 1960	97	Give 60° night & 70-75° day temp.
Jan. 18	90	New shoots breaking soil
Jan. 25	83	Shoots 1 - 3 inches
Feb. 1	76	" 3 - 5 "
Feb. 8	69	" 6 - 7 "
Feb. 15	62	" 9 - 11 "
Feb. 22	55	" 12 - 15 "
Feb. 29	48	Feel the buds
Mar. 7	41	Just see the buds
Mar. 14	34	Buds 1/2 to 1" long
Mar. 28	20	" 2 - 3" long
Apr. 4	13	" 3 - 5" "
Apr. 5	12	Start cooling early plants if weather permits, or store early flowering plants in cold storage at 38 - 40°.
Apr. 9	8	Plants should be ready to sell.
Apr. 16	1	All sold out
Apr. 17	0	Easter

EASTER LILY

Plant on left — grown with inadequate fertilizer; note light colored leaves and loss of lower leaves.

Plant on right — fertilized properly.

# WORLD FAMOUS JAN DE GRAFF LILIES FOR GARDEN AND GREENHOUSE

These acclimated Oregon grown lilies are entirely hardy and disease free. The bulbs are bursting with vigor of their hybrid origin, and are delivered with vigorous root system for planting at proper time in early fall.

## THE NEW BOOK OF LILIES by Jan de Graaff

Superbly illustrated in natural colors, this book sums up basic culture, pests and diseases and what to do about them, how to grow lilies, reference charts, booming dates, etc., etc.

## Forcing Garden Lilies

Trials have shown that some varieties such as Valencia, Enchantment and other Mid-Century Hybrids are excellent items for spring sales. Not all varieties are short enough or have enough foliage color for attractive potted plants.

When handled like Crofts and potted in December, flowering time is approximately 90 days. Later plantings come faster.

Garden lilies are well worth a trial; — something different for spring. The customer can plant them in the garden after flowering is finished in the home. Fine for corsages or baskets. Prize material for flower shows.

Rubrum and other Speciosum varieties can be flowered anytime after mid-May. Allow 4 1/2-5 months at 60°.

## MID-CENTURY HYBRIDS

**ENCHANTMENT.** (U.S. Plant Patent 862). Vivid nasturtium red, petals nicely spotted. Height 28 inches. Late June — early July flowering.  
Per Doz: 4.25 Per 25: 7.50 Per 100: 28.00

**PROSPERITY (NEW)** Lovely cool lemon-yellow. Height 4 feet. July flowering.  
Per Doz: 6.25 Per 25: 11.25 Per 100: 42.00

**MID-CENTURY HYBRIDS MIXED.** (Blended colors and types.) Especially selected for beauty, hardiness and vigor.  
Per Doz: 4.25 Per 25: 7.50 Per 100: 28.00

## ORIENTAL LILIES

**AURATUM PLATYPHYLLUM.** (GOLD BAND IMPROVED). Broad petalled white flowers banded with yellow, spotted crimson. Height 5 feet. August-September flowering.  
Per Doz: 8.50 Per 25: 16.00 Per 100: 60.00

**AURATUM VIRGINALE.** Large widely expanded pure white flowers, golden stripe down center of each petal. Height 4 feet. August flowering.  
Each: 1.75 Per Doz: 16.50 Per 25: 32.00

**AURATUM "RED BAND STRAIN".** Broad petalled white flowers banded crimson through center of petals. Heavily spotted crimson. Height 5 feet. August- September flowering.  
Each: 3.50 Per Doz: 35.00

**JILLIAN WALLACE.** Flowers more than eight inches across. The plants bear as many as seven huge blooms on 5 feet stems. Color vibrant crimson red bordered with white.  
Each: 4.25 Per Doz: 45.00

**RED CHAMPION.** Deep pink spotted crimson. Height 4 to 6 feet. August-September flowering.  
Per Doz: 5.50 Per 25: 10.00 Per 100: 38.00

## SUNBURST LILIES

**BELLINGHAM HYBRIDS MIXED.** Color range from clear yellow to yellow-oranges to bright orange reds with scarlet tipped petals. Height 4 to 5 feet. July flowering.  
Per Doz: 6.25 Per 25: 11.25 Per 100: 42.00

**PARDALINUM GIGANTEUM "SUNSET".** Bright red tipped recurved flowers. Height 4 to 6 feet. July flowering.  
Per Doz: 5.50 Per 25: 10.00 Per 100: 38.00

**SUNBURST STRAIN.** Resemble L. Henry in shape. Colors include white, yellow orange. Height 5 feet. July flowering.  
Per Doz: 7.00 Per 25: 12.50 Per 100: 47.00

## NEW TRUMPET LILIES

**BLACK DRAGON STRAIN.** Inside of flower pure white, outside rich purple brown, margined pure white. Height 3 to 4 feet. July flowering.  
Each: 2.00 Per Doz: 19.00 Per 25: 37.50

**EMERALD STRAIN.** Large beautifully shaped trumpet. Pure cool white with a flush of emerald green when first opening. Height 3 to 4 feet. July flowering.  
Each: 1.00 Per Doz: 8.50 Per 25: 16.00

**GOLDEN CLARION STRAIN.** Golden yellow trumpet, the result of crossing L. Henryi with the Olympic strain.  
Each: 1.00 Per Doz: 8.50 Per 25: 16.00

**HEART'S DESIRE STRAIN.** Bowl shaped flowers in shades of white, cream and yellow orange. Height 3 to 4 feet. July flowering.  
Each: 1.25 Per Doz: 12.00 Per 25: 22.50

**OLYMPIC HYBRIDS.** Style of blooms vary from trumpet shape to open bowl type, petals slightly twisted and ruffled. Color from creamy white to soft pink. Height 5 feet. July flowering.  
Per Doz: 4.75 Per 25: 8.50 Per 100: 32.00

**PINK PERFECTION.** Robust giant trumpet in shades of fuchsia to rose pink. Height 4 feet. July flowering.  
Each: 1.50 Per Doz: 15.00 Per 25: 26.00

**ROYAL GOLD.** A golden-yellow true breeding mutation of the Regal lily. Identical with the best Regale except for its true golden coloring. Flowers have a most attractive, shiny glistening surface, which adds to its beauty.  
Each: 1.50 Per Doz: 15.00 Per 25: 26.00

## WILD LILIES

**CITRONELLA STRAIN.** Stem carries as many as thirty large recurved flowers, color lovely pure yellow, spotted with small black dots. Height 4 to 5 feet.  
Per Doz: 4.50 Per 25: 8.25 Per 100: 30.00

**FIESTA HYBRIDS MIXED.** Gracefully reflexed flowers in beautiful color range from bright yellow through orange to a rich dark red.  
Per Doz: 4.25 Per 25: 7.50 Per 100: 28.00

**LANKONGENSE.** Pale lilac rose, spotted purple strongly recurved. August flowering.  
Per Doz: 8.00 Per 25: 14.00 Per 100: 52.00

LILIUM CANDIDUM (Northern Grown)

### CANDIDUM (Madonna Lily)

This lily likes a good, deep loamy soil, not too dry, and a sunny situation where it can be left undisturbed for years. Plant shallow, covering the bulbs not more than 1 inch or 2-3 inches if the soil is very light. Height 4-6 ft. June flowering.

### LILY BULBS FROM JAPAN

**Auratum.** The magnificent golden banded lily of Japan, large white flowers with a golden band down the center of each petal. The fragrant flowers, heavily spotted crimson, are carried on strong stems 3-6 feet high. Stem rooting, plant 8-12" deep.

**Auratum Platyphyllum.** Undoubtedly the best of the Auratum family. Large flowers and stronger grower than Auratum. Plant the same as Auratum.

**Rubrum Magnificum.** Handsome heads of flowers with reflexing petals heavily spotted crimson on white ground

RUBRUM MAGNIFICUM

### LILIUM REGALE (Oregon Grown)

One of the finest most beautiful of all Lilies, and certainly one of the easiest to grow, thriving in a great variety of soils. Slender stems, crowned with several large, funnel-shaped flowers variably wine-colored without, pure white on the face, clear yellow within the tube; anthers golden. Vigorous grower, attaining sometimes as high as twenty flowers or even more on a single stem. Stem rooting. Plant the bulb 8" deep in any good well drained loam, with or without lime, preferably in a sunny position. Height 4-6 ft. July flowering.

Size	Quantity	Per 100	Per 1000
7/8"	250 per case	17.50	160.00
8/9"	200 per case	22.50	210.00

10/11"	100 per case	39.00	370.00
11/12"	75 per case	47.50	450.00

### NORTHWEST GROWN

These acclimated, American-grown, disease-free and hardy bulbs are bursting with the vigor of their hybrid origin. Delivered with vigorous root system. Carefully packed in peat moss.

#### SPECIOSUM "RUBRUM"

Finest selected strain. Entirely disease free, freer of flower, richer of color, far superior to the imported stock.

7/8".....250 per case	75.00	9/10".....150 per case	75.00
8/9".....200 per case	75.00	10/11".....100 per case	60.00

#### SPECIOSUM "LUCIE WILSON"

A superior Rubrum. Entirely free from virus. Will produce maximum quantity and quality blooms under proper growing conditions. Bud count ranges from 9 to 12 blooms per stalk in outside gardens and 12 to 15 per stalk under glass.

7/8".....150 per case	60.00	9/10".....100 per case	60.00
8/9".....125 per case	60.00	10/11".....80 per case	60.00

#### SPECIOSUM "ROSEMEADE"

Blooms same color as Lucie Wilson but one-third smaller and one-third more blooms per stalk. Foliage considerably shorter and brownish green color, carries 12 to 15 blooms per stalk in the field and 16 to 22 under glass. For the forcer who wants plenty of blooms, "Rosemeade" is the answer.

7/8".....150 per case	68.00	9/10".....100 per case	68.00
8/9".....125 per case	68.00	10/11".....80 per case	65.00

COMPLETE SEED AND PERENNIAL CATALOGS  
AVAILABLE FOR THE ASKING

## IRIS FOR FORCING

1. Bulbs are usually planted as soon as received. Keep them dry and cool (50°F) if they must be held.

2. **Planting** — Plant bulbs in flats 4 to 5 inches deep with soil of medium fertility, and no fertilizer during forcing. Excessive nitrogen **delays** flowering and causes weak stems. Leave as much space as possible under the bulbs for the roots; barely cover the bulbs.

3. **Moisture** — Water well after planting and **keep the soil moist**. Allowing soil to become dry causes short stems and blasting of flower buds.

Avoid rooting beneath flats. Place flats on boards or cleats so roots are not injured if flats are moved. Flats can be moved if the soil is kept continually moist.

4. **Spacing and light** — Lack of sufficient light causes blasting of flower buds. Use a 3 x 4 inch spacing for winter forcing; for spring flowering, 3 x 3 can be used.

Light is important; don't use benches shaded by other crops or by gutters, workrooms, etc. Be sure the greenhouse glass is clean; remove any shading.

5. **Forcing temperatures** — Don't force at too high temperatures. High temperatures encourages flower blasting and bleach flower color. Place thermometer at plant height so you get correct temperature information. In cloudy weather, iris are grown cooler than in bright weather.

### In general, force

11/12 cm bulbs not over 58° for earliest flowering.

10/11 " " " 55° for late Jan. to Apr. flowering

9/10 " " " 53° for late Jan. & Feb. flowering

8 1/2/9 " " " 50° for late Feb. & Mar. flowering

6. **Pre-cooling** — Six weeks storage at 48 - 50° is the minimum for Wedgewood whereas Blue Ribbon requires 8 weeks. Pre-cooling prevents grassiness and weak stems. Pre-cooled bulbs should be planted in less than 5 days after pre-cooling.

### 7. Storage and Forcing

a. Plant pre-cooled bulbs of Wedgewood or Blue Ribbon (a strong growing deep blue iris which often brings a premium in the market) in flats or benches in mid-October for mid-December flowering.

**OR** the pre-cooled bulbs can be flatted and placed in storage at 50° until mid-November and forced. There probably will be 2 to 2 1/2 inches of growth by this time and plants will flower in late December and early January.

b. Bulbs which are not pre-cooled are flatted in mid-October and stored in a 48-50° cold storage, or buried out of doors. When forcing is started, the shoots should be about 2 inches tall. Figure 8 weeks for flowering Wedgewood.

8. **Other Varieties** — Various Dutch iris, other than Wedgewood and Blue Ribbon can be stored as outlined above and forced at 50°F with flowering in late February and March.

## IRIS RETICULATA

	100	1000
Sweet scented deep violet purple flowers with golden blotch, flowering outdoors in February. Can be forced inside to bloom at Christmas	3.00	25.00

Left. Blasting of iris flower buds caused by too close spacing in winter (short days). Practically 100% cut from flat on right. These are from the same lot of bulbs but given more spacing (and light). Space not less than 3" x 4".

## BULBS AND TUBERS FOR GREENHOUSE FORCING

**ALLIUM.** See Freesia (same culture)

### ANEMONE

Plant "bulbs" in flats or bench in October for flowering starting in January. Grow at 45-50°F. Use 4 x 10 inch spacing. Because of crown rot problem, keep water off crowns by watering soil between the rows. Use Fresh soil.

### BEGONIA — Tuberous rooted

Start tubers in February in moist peat or peat and sand at 70° until rooted. High temperature is important. Pot in 1/2 peat - 1/2 soil mixture and grow at 60-65° for May flowering. An excellent garden item. Good to grow in 4 and 5 inch peat pots. If your greenhouse is not warm enough, cover the bulbs with a clear plastic canopy reaching to the ground, over a raised bench with bottom heat.

### CALADIUM

A decorative plant for the home, and excellent as bedding plant in semi-shady locations in the garden. Same culture as Tuberous Rooted Begonias.

**Varieties** — Write for our free special folder showing varieties in color.

**Care of bulbs** — Caladium bulbs are very sensitive to cold temperatures. When your bulbs are received, remove them from the carton immediately and spread thinly in a warm location, with good air circulation. In this way bulbs should hold any reasonable time until you are ready to plant. (See Caladium Page 23)

### CALLA LILY

**White Cut Flower (aethiopica)** — Plant rhizomes ("bulbs") in August. Use soil mix of 25% peat moss and 75% soil and mix in superphosphate, 4 pounds per 100 square feet of soil. Sterilize soil, preferably with steam, in the container. Plant in benches, boxes or large pots. Fertilize monthly with ammonium sulphate and muriate of potash each at 1/2 pound per 100 square feet OR give good bi-weekly watering with 20-20-20 fertilizer solution (2 pounds per 100 gallons of water). Keep soil moist. No need to dry off plants in summer. Plants will flower all summer if watered, with light shade on the house.

Grow at 55° night temperature and 65-70 during day. Give full sunlight from September to late May and some shade in summer months.

Root rot is a common disease of Callas. Discard plants that look sick. Scrub dormant "bulbs", cut out rotted spots, soak one hour in solution containing 1 gallon of formaldehyde in 50 gallons of water. Plant in sterilized soil in sterilized containers on sterilized benches.

**Yellow Calla for pot plant (Elliottiana)** — The "bulbs" are potted about 3 months before flowering time in same soil mix as for white callas. Grow at 60-65° night temperature, OR you can start rooting the rhizomes in peat held at 75-80° and then pot them up after good roots form. Move to 55° the last couple weeks before sale to improve keeping quality.

### CROCUS — For Forcing

1. A good merchandising item for spring sales, as well as Valentines Day and Easter.

2. **Planting** — Plant bulbs (corms) to a 4 inch bulb pot using the 9-10 cm. or larger size, with top of corms about 1 inch under the soil surface.

Store in 48°-50° storage cellar, or out of doors until mid - January.

3. **Forcing** — Plants started in latter half of January will take 3 weeks to bloom at 60-62° N.T. In February, figure 3 weeks and in March 2 weeks for flowering.

4. **Varieties** — *Purpurea grandiflora*, a rich purple, is one of the best for the early crops, with yellow and white varieties added for March and Easter.

5. **Sales appeal** — Not only is this an inexpensive item, but the customer can plant the bulbs in her garden for blooms again the following year.

**DAFFODILS** — See page 11

### FREESIA

Plant corms in flats deep (6 to 8") or bench with 1 1/2 x 6" inch spacing. Keep soil moist at all times. Give plenty of light and ventilation. Grow at 50°. August plantings flower in December, and November plantings in March. Flowering in April has not been very successful.

**GLADIOLUS** — See page 25

*Gloriosa Rothschildiana* (See page 26)

### GLOXINIAS

A wonderful sales item for summer months when business often is slack. Plan a promotion with retailers. Also a good Mother's Day item if planted in November. Plants of high quality sell "like hot cakes".

Start tubers ("bulbs") in moist peat and sand at 65-70°. When rooted, pot in half soil - half peat mixture, with one tuber per 5 to 6 inch azalea pot, depending on size. Keep soil moist and shade from direct sun. Ready for sale from March on. Fertilize once every 2 to 3 weeks with 20-20-20 fertilizer (2 lbs. per 100 gallons.)

### GRAPE HYACINTH (Muscari)

1. Another good item for merchandising and "come on" sales. Can be planted in the garden after flowering.
2. Space bulbs 3/4" apart in a 4 or 5 inch bulb pot, with top of bulb 1/2 inch below surface of soil.
3. Store in 48-50° storage cellar for about 8 weeks and then force in 50-55° greenhouse. Will bloom in about 3 weeks.

**IRIS** — See page 20

### IXIA AND LEUCOCORYNE

Corms planted 2 1/2" in flats in October through December are stored at 40° for 8 weeks and then grown at 50-55° in greenhouse. Figure on flowering 4-5 months after moved into greenhouse. Can be planted in cold frames in the fall, protected during winter with flowering in May. Flowers close up at night unless kept in bright light.

### LILIES

Easter Lilies — See pages 14-15-16

Garden Lilies — See pages 17-18

### LILY OF THE VALLEY

A good merchandising item to go along with crocus and grape hyacinths in pots. Plant pips in sand or sandy soil and store at 32-35° until ready to force. Figure 3 weeks to flowering if grown at 75°; longer if grown at 65°.

If grown for cut flowers, plant an inch apart in rows 3 or 4 inches apart in sand or sphagnum. Give 75-80° temperature with bottom heat. Use heavy muslin shade for the first 2 weeks to protect new growth and draw up the plants. Cut the flower stems when terminal bud has lost its green color.

**NARCISSUS** — See pages 9-11-12-13

### ORNITHOGALUM

Bulbs flattened in October and grown in 60° greenhouse give cut flowers in February. November plantings flower in March and early April. Will flower a little later if grown at 50°.

Individual florets are excellent for corsage work. One of the longest lasting cut flowers.

### OXALIS

Pot bulbs in October and grow at 55° for spring sales.

### RANUNCULUS

Plant "bulbs" in fall for flowering in spring months. Grow at 50° Use 4 x 10 inch spacing. Water between plants to prevent crown rot. Use fresh soil.

## BEGONIAS-TUBEROUS ROOTED

"MINIMUM ORDER 100 BULBS AND NOT LESS THAN 10  
IN ANY ONE COLOR

### AMERICAN GROWN

#### New Ruffled Camellia Type.

Blooms are beautifully frilled and ruffled in a complete range of all colors.

COLORS—Apricot, Blush, Cardinal Red, Crimson Rose, Dark Salmon, Dark Red, Light Salmon, Pink, White, Rose, Scarlet, Yellow, Orange, Flame Orange.

## SPRING FLOWERING BULBS FOR THE GARDEN

A satisfied customer is likely to buy more. Here are some hints for successful culture of spring flowering bulbs in the garden.

1. A good succession of color can be had with the Snowdrops (*Galanthus nivalis*) followed by Chionodoxa (Glory of the Snow) Crocus, Grape Hyacinths, (Muscari) and Scilla. Then come the hyacinths, daffodils and tulips.

2. Garden bulbs will not tolerate wet soggy, poorly drained soils. Before planting, prepare the soil well by applying an inch of peat moss and some 5-10-5 (3 pounds per 100 square feet) and working it into the top 8 to 10 inches of soil.

3. Depth of planting is important. See bulb planting chart. (Page 61)

4. Allow foliage to remain on the plants to build up the food supply for the next year. Remove seed pods. After flowering, apply 5-10-5 at the rate of 2 pounds per 100 square feet. Usually clumps of bulbs become crowded after 3 years and should be divided and replanted. This is done after the plants die back to the ground.

5. Rembrandt tulips should be planted in an isolated area since the interesting "breaking" or variegation of color is due to a virus disease which might spread to other tulips.

## GLADIOLUS FOR CUT FLOWERS (Outdoor)

1. Before planting in the field soak the corms in New Improved Ceresan or Ceresan M (2 pounds per 100 gallons of water) for 15 minutes or Dowicide (6 lbs. per 100 gallons) for 30 minutes. If corms have not been treated with DDT, add it at the rate of 1 pound of 50% DDT wettable powder per 100 gallons.

2. For insect control throughout the growing season, spray weekly with Aramite and DDT or Malathion and DDT.

3. Apply a complete fertilizer before planting and a side dressing of nitrogen fertilizer one month later. Fertilizer practices vary depending upon the type of soil.

4. Corms are planted 4 to 6 inches deep and 3 to 5 inches apart in rows spaced wide enough apart for mechanical cultivation.

5. Weed control with chemicals, such as Karmex DW, DINOTRO or Chloro IPC, is used in commercial plantings.

6. Corms are dug after plants have died back to the ground, cured for 2-3 weeks at 80-85° after digging, and stored at 35-45° until planting the next year.

## GLADIOLUS FOR THE GARDENER

1. This is an excellent item for resale, especially the polyethylene packaged units. Give the gardener information as to how best to handle gladiolus corms for good satisfaction.

2. Plant in a location with full sun and well drained soil. Apply 5-10-5 or 4-12-4 fertilizer at the rate of 3-4 pounds per 100 feet of row area and dig it into the soil or split it into 2 applications with 2 pounds worked into the soil before planting and 2 pounds as a side dressing 5 or 6 weeks later.

3. For succession of bloom plant corms at two week intervals until June 15.

4. Hand cultivation and weeding are preferred to chemical weeding unless the person is willing to observe all necessary precautions.

5. Allow the plants to mature and die back in the garden. Then dig out the plants, cut off the tops, and dry the corms in the sunshine for a day or two. Then store 2-3 weeks at 80-85° for final curing, and store at 35 - 45° through the winter.

6. Dusting the corms with DDT dust before storage control thrips. Spray weekly with DDT or Malathion during the growing season.

# CARNATIONS

Carnation production has undergone many changes in the last ten years with the introduction of direct benching, methods of pinching, indoor culture, greenhouse cooling, liquid fertilization, etc. Various growers produce profitable crops with various production schedules.

## 1. PROPAGATION —

It is simpler and cheaper to buy SSS cuttings than to produce your own. Order them for the time you wish to plant.

## 2. BENCHING TIME —

Direct benching can be done with success any month with the possible exception of August, and may be given a pinch or two before allowing the plants to grow on to flowering.

Some growers prefer to pot the cuttings in Jiffy pots or bands and give one pinch before transplanting to the final bench location. This makes it possible to continue cutting flowers from the original benches through May and early June.

In either case, the grower does not put his plants out of doors where the plants may become contaminated with disease and insects.

Plant the cuttings in the soil at just about the same depth as in the propagating bench. If the plants are in pots or bands, plant so the top  $\frac{1}{2}$  inch of the pot or band is above the soil in the bench to help prevent trouble with *Fusarium* stem rot.

## 3. PINCHING —

Several systems and procedures can be followed. Pinching helps to increase the size of plant and also has an important place in the timing of the flowering crops.

**1. Single Pinch** — The pinch is made high. Allow the cutting to grow 4 to 6 weeks; side shoots may be evident. Then remove the top of the plant leaving as much as 5 or 6 pairs of leaves if possible. The side shoots are then allowed to flower.

In general, with Sim varieties, rooted cuttings benched in June 5 to 15 would be ready for a pinch 4-6 weeks later, and would crop heavily in December with a few flowers in November and some in January. The comeback from this crop would give heavy flowering again in late spring (late May and June). During the winter flower production would be low.

**2. First flower as a pinch** — Let the cutting flower. Cut the flower with a short stem; this flower has many uses especially for the retail grower. Cutting the flower acts as a pinch.

**3. Pinch and a half** — The purpose of this method is to eliminate the heavy cropping and to spread out the flower production. The planting would be similar to the single pinch except a couple weeks earlier. As the new shoots develop in July and early August, half of the shoots would be given a pinch to force new side shoots which would flower in January, February and March.

**4. Double Pinch** — This system gives more spread out production throughout the winter and spring. Plant cuttings at a close benching space, or in Jiffy pots in March and April so a first pinch can be made in May and a second pinch in late June and July. Bench the plants in the final location in June. The different rates of growth of the various shoots will result in some flowers in the fall and heavier production in winter and spring months. If carnations are not desired in the fall months, then shoots can be pinched until the latter part of July forcing these shoots to branch and flower in the winter and spring.

## 4. SPACING —

Spacing depends on size of plants and number of breaks per plant, rather than a specific spacing for all sized plants. Figure on having 20 good shoots per square foot of bench area by July 15. If the plants average 4 shoots per plant, use a spacing of 4x7 inches which will give about 5 plants (or 20 shoots) per square foot.

If the plants are larger and have more shoots, the spacing can be increased. For single pinch plants, common spacings used are 4x4, 5x5, and 4x7 inches. For double pinched plants, 7x7, 7x8 and 8x8 are more common. For pinch and a half, 5x7, 6x6 and 4x9 are satisfactory.

## 5. SOIL —

Good soil preparation is essential. Amend previously used soils by adding  $\frac{1}{4}$  by volume of a good fibrous grade of peat, and by applying superphosphate to the soil at the rate of 4 pounds per 100 square feet; mix both thoroughly into the soil. The pH should be between 5.0 and 7.0. Then steam the soil and hold it at a minimum of 180° in all parts of the bench for 30 minutes. As soon as the soil has cooled, the benches can be planted.

New sod soils also should have peat moss added. A soil test by your agricultural experiment station or commercial soil testing lab is recommended so you can find out what fertilizers should be added.

## 6. FERTILIZER PROGRAM —

Various programs will produce good carnations. Monthly soil tests serve as a guide to a fertilizer program. Applications of the 20-5-30 or 25-10-20 soluble fertilizer at the rate of 2 pounds per 100 gallons of water every 2 weeks in good growing weather and every 2 $\frac{1}{2}$ -3 weeks in darker weather will help maintain good nutrient levels. Give the soil a good watering with the fertilizer solution.

Some growers apply fertilizer in solution every time they water with a water robot. In this case, the water coming out of the hose will have about  $\frac{1}{2}$  pound per 100 gallons. Either a tank and pump, or a proportioner can be used.

Another approach is to apply only single element fertilizers as shown by soil test. Muriate of potash at the rate of  $\frac{1}{2}$  pound per 100 square feet supplies potassium. Use nitrate of soda (1 lb. per 100 sq. ft.) for nitrogen if the soil pH is below 5.8. Sulphate of ammonia at the same rate supplies nitrogen fertilizer. Potassium nitrate ( $\frac{1}{2}$  pound per 100 square feet) is a good source of both nutrients. Organic fertilizers are not recommended because of the slow breakdown in cold carnation soils.

Boron may be needed. In some areas a lack of boron has caused increased splitting, abnormal flowers, and abnormal shoot growth. Since only a very small amount of boron is required and too much can give trouble, you should consult your experiment station.

Since the amount of fertilizer required to maintain optimum growth and flowering will vary according to time of year and rate of growth, size of plant, amount of watering and leaching, etc. in each grower's establishment, he must use his own judgement as he watches the appearance of the plants and their growth.

# CARNATIONS

(CONTINUED)

## 7. WATERING —

Carnations grow and flower best if the soil has good drainage and is kept continually moist. Immediately after planting, moisten the soil well so the plants will have a good moisture supply while new roots are getting established. Keep water off the foliage to avoid possible disease.

Consider a semi-automatic watering device such as the SSS water robot, the plastic hose with holes or nozzles, pipe and fan spray nozzles, which are labor saving and reduce costs. Some growers apply fertilizer solutions through the watering system.

## 8. GREENHOUSE COOLING —

The fan and pad method of evaporative cooling has been the most effective; it is more effective in dry areas than in sections where humidity is high. Cooling not only is very helpful in getting newly planted benches off to a fast start, but also is very useful in maintaining high quality flowers in the warm spring and fall months.

## 9. TEMPERATURE —

Temperature in relation to light (weather conditions) affects quality. A night temperature of 50° with day temperatures of 55° on cloudy days and 60-65° on bright days is good for Sim and related varieties. In extremely cloudy weather, a night temperature of 48° improves strength of stem and flower size, which compensate for the somewhat slower development.

For some varieties, such as the Littlefield group, use a night temperature of 54-55°.

Occasional low temperature at night or wide fluctuations from day to night apparently increase splitting.

## 10. LIGHT —

One of the big advantages of some western carnation producing areas is light, especially during winter, when production is desired. Because light is important, be sure the glass is clean in the fall and winter; use a cleaner if necessary.

In summer, a very light shade for 7 to 10 days can be used to protect newly benched cuttings or plants if greenhouse cooling or misting is not available. During the rest of the year give full sun except possibly a very light shade to protect flowers in late May and June if cooling is not in operation.

## 11. DISBUDDING AND GRADING —

Removing side buds when small will throw the energy into the large terminal flower. With some varieties which are to be used for boutonnieres or corsages, all of the buds may be allowed to flower. The individual flowers are smaller than if there were only one per stem but increased production offsets the lower price per flower.

Likewise some of the new miniatures such as Elegance are not disbudded; instead, only the center bud is removed.

Growers vary as to whether they cut with a knife or snap out the flowers. Either is okay. When harvesting the flowers, use good judgement as to whether the flower is cut above or below a new break, especially in the fall, when this new shoot can develop into a good spring flower.

After picking, put stems in water in a refrigerator at 34-40°F for a few hours before packing for shipment. Low temperature conditioning (storage) at 31° is satisfactory for holding flowers for 10 to 14 days as a marketing aid for holidays.

## 12. INSECT AND DISEASE CONTROL —

Red spider mites, aphids and thrips are the principal trouble makers. You started out with a clean cutting so keep it clean with a preventive control schedule. A drench with 1 pint of 23% Systox plus 1 pound of terraclor per 1000 square feet, using enough water to get good distribution, should be made 3 weeks after benching. Then the Systox treatment is repeated every 3 months. OR, a spray or Aerosol treatment with Parathion, Malathion, Kelthane or Aramite should be made 3 weeks after benching and repeated at monthly intervals. The Terraclor drench for disease control would be made separately as outlined above.

When thrips are a problem in warm weather, make weekly or even semi-weekly applications of Parathion, Malathion, or Lindane, because thrips will be continually coming in from outside the greenhouse.

The diseases *Fusarium* and bacterial wilts, *Rhizoctonia* stem rot and leaf spot and branch rot can be controlled. Steam sterilize benches and tools, plus clean cuttings grown indoors in sterilized soil are essential for control of these diseases. Strict sanitation is needed. The Terraclor drench helps to prevent trouble from *Rhizoctonia* stem rot. Weekly spraying with Zineb or Captan (1 pound per 100 gallons) controls alternaria which should not be a problem if inside culture is used.

Carnation rust should not be tolerated since control can be obtained by keeping water off of the foliage and by spraying weekly with Zineb.

Greasy blotch is another disease which is not a problem if a regular spray schedule with Zineb or Captan is followed.

Botrytis flower spot can be prevented by proper watering and ventilating to prevent high humidity in the greenhouse especially at night.

*Fusarium* stem rot — Use sterilized soil and drench the soil with Panodrench to stop spread of disease if it appears. Since the drench may slow down growth temporarily, spot treatments rather than general applications are followed.

Viruses — Streak, yellows and mosaic should not be serious if clean healthy cuttings are planted.

# CARNATIONS — CERTIFIED ROOTED CUTTINGS

## NEW VARIETIES

Per 100 Per 1000

**APOLLO #2.** A selection of Apollo with larger flowers and longer stems. .... 11.00 100.00

**\*ELEGANCE. (Thomson).** NEW MINIATURE CARNATION. Blush pink and white sport of Exquisite. By taking out terminal bud and letting remaining lateral buds open, graceful spray with 4-8 miniature flowers will develop; suitable for bouquets, and corsages ..... 20.00 180.00

**ELLEN MARIE.** New light sterling silver pink..... 20.00 160.00  
(Minimum 250 cuttings)

**IWATA'S WHITE SIM.** Scored 87.6 at 1959 Carnation Convention. Top awards elsewhere. Exceptional in size,—shape,— production,— keeping,— shipping,—and growth habits. January and later delivery (250 or more) ..... 150.00

**MIDAS # 2.** A vigorous selection with longer and stronger stems, more uniform in size and form. ....

**PETERSON'S NEW PINK SIM.** Beautiful light pink sport of Mamie. Similar in color to Light Pink Littlefield Holds its color well in hot weather. .... 15.00 100.00

**PETERSON'S RED SIM.** New this season. Sport of S. Arthur Sim. Similar to William Sim in size and color but more prolific. .... 15.00 100.00

**SHIBUYA'S LIGHT PINK. (Sport of Mamie.)** A trifle darker than Peterson's Light Pink Sim. Holds it's color in bright weather. (250 or more) ..... 150.00

**SHIBUYA'S SIM. (Sport of Mamie.)** Slightly deeper shade than Shilbuy's Light Pink, with a Salmon cast. ....250 or more..... 150.00

## STANDARD VARIETIES

### WHITE

Per 100 Per 1000

**Hoosier Spice.** Pure white fragrant ..... 15.00 130.00

**Imp. Olivette** ..... 12.00 100.00

# ROSES FOR FORCING AND SPRING SALES

## POT PLANTS FOR HOLIDAY SALES

1. Use strong **SSS** 2 year old budded plants with heavy canes, properly graded.

2. When plants arrive, put in pots large enough for the root systems after puddling (soaking) roots. Do not cut off roots unless damaged. If not potted immediately, hold in 33-35° storage. Figure on starting plants about 3 months before sale. Usually January 1 is o.k. for Easter sales and February 1 for Mother's Day.

3. Use a soil mixture of 3 parts soil and 1 part peat.

4. Prune out any broken or weak stems and prune tops (above Nodes) of hybrid tea, floribunda, and polyantha (baby rambler) varieties back to 6 to 8 inch height. Climbers should **not** be cut back at all.

5. Put plants in 50° greenhouse or storage shed for two weeks, then move to 58-60° greenhouse. Keep soil and tops of plants moist by syringing to encourage "breaking" of buds. Moist burlap holds humidity but must be removed as soon as growth starts.

6. When growth is 2 inches long, start feeding with complete fertilizer and follow a regular fertilization program.

7. Flowering time is controlled by temperature adjustment and pinching. Hybrid tea varieties pinched 6 or 7 weeks before sale should start to show color about a

week before sale. Polyanthas given a pinch 8-9 weeks before sale for Easter or 7-8 weeks before Mother's Day should show some color 10-14 days before selling time, and be ready for sale 10 days later. Raising or lowering temperature will speed up or slow down the rate of growth. Pinch back plants not sold for Easter to flower again 6-7 weeks later.

8. **Insects** — Red spider mites can usually be controlled by regular monthly applications of Parathion, Malathion, or some other similar material. If you are not getting control, consult your Agricultural Extension Specialist. For aphids, use Lindane, or Malathion or Parathion.

9. **Diseases** — Mildew should be prevented. Keep humidity down by proper heat and ventilation. Vaporize sulphur OR spray with Karathane (4 - 6 ounces per 100 gallons of water) with a detergent for complete wetting.

10. **Varieties** — Polyantha and baby rambler varieties are listed on page 36. Hybrid teas that force well are Peace, Pink Peace, Nocturne, Sutter's Gold, Grand'mere Jenny, Love Song, Eclipse, and Mojave; **Garnette** is a good red floribunda. For climbers use Blaze, Bonfire and Paul's Scarlet.

The **Miniature or Tom Thumb** roses and Miniature Tree roses force well and are listed on page 36.

## FORCING FOR MAY—JUNE SALES

In addition to a color poster, a color plate of each variety is given to you. Sell roses early, before flowering. This saves you money and gives customers added satisfaction.

1. Pot the dormant plants about 8 weeks before selling time. If the plants arrive before the potting date hold in 32-35° storage.

2. Use a good soil mixture and 7 x 9½" perennial pots (see page 57). Don't cut roots except trimming broken roots. Prune the tops back leaving 6 to 8 inches of growth above the crown where the plant was grafted. Plant to a depth so crown is even with the surface of the soil.

3. Moisten the soil and don't let soil dry out. Keep the tops of the plants moist to induce growth of the dormant buds. Grow at 58-60°. Plants can be moved out of doors when danger of frost is past. Start fertilization program after new shoots are 2 inches long.

4. Spray or fumigate plants regularly for disease and insect control.

5. A clean plant that has started to grow and flower is a plant that will surely give customer satisfaction. Tell the customer to remove the perennial pot before planting and to put the plant in the garden with the top of the soil ball one to two inches below the soil surface in the garden. Have them water the soil well around the newly set plant.

Before planting in the garden, several inches of peat moss and 5-10-5 fertilizer at the rate of 2 pounds per 100 square feet should be put on the garden soil and mixed thoroughly by spading to a depth of 12 inches. Hybrid teas and floribundas should be spaced 24 to 30 inches apart.

# ROSES

FOR FORCING AND SPRING SALES

Fine robust 2 year plants with heavy canes, properly graded and packed. Shipped F.O.B. Penna. or New Jersey. Minimum order 50 plants Minimum 10 of a variety. Packing extra at cost. **If sold out of any varieties we will substitute unless requested not to do so.**

### MINIATURE ROSES

#### F.O.B. PENNSYLVANIA SHIPPING POINT

"A NATURAL" for Easter and Mother's Day — Either singly or in combinations. Requires 60 days at 60. degrees.

Miniature roses are permanently tiny, hardy outdoor plants, as hardy as regular H. T. Garden Roses. They should not be confused with Polyantha Roses. These miniatures grow only about 6 to 12 inches high, with blooms the size of a 5 or 10 cents piece when fully open.

Miniature Roses are shipped from September until May, from 3 inch pots with soil on their roots and each plant is wrapped with Sphagnum moss in foil. On dormant plants shipped after Dec. 1st tops are cut back about 1 inch to assure vigorous symmetrical growth from the base.

For over the counter sales pot them in 3 or 4 inch pots and bring into growth in a greenhouse or out of doors.

# AZALEAS

Azaleas are increasing in popularity for florist sales throughout the year. Some varieties such as the Kurumes and New Roehrs Hardy Varieties are excellent for Mother's Day sales and can be planted in the garden by the customer. "Hardiness" is affected by many factors; most evergreen or semi-evergreen varieties are not hardy in the severe climates of many northern areas.

**Flower Bud formation** — Azaleas form flower buds in warm days of summer. Later the plants must be exposed to cool temperatures for at least 4 to 6 weeks so the plants force easily and uniformly when put in the warm greenhouse.

**Production of plants** — Growers can purchase transplants in flats, or 2¼ inch size small plants which can be grown on to produce larger plants. Frequently larger sizes are lined out. Or he can purchase large dormant plants all ready for forcing. Many growers find it best to purchase dormant plants ready for forcing, since many varieties have to be 2 to 3 years old to flower properly.

## DORMANT AZALEAS FOR FORCING

1. When received, soak the root balls thoroughly and store in a light and cool 45-50° greenhouse. Pot the plants using peat moss with good drainage. Keep the soil moist; dry soil causes leaf drop and injures flower buds.

2. **For Christmas** — Kurume varieties need at least 4 weeks of storage at 40°. Indica varieties need 6 weeks at 40°, usually in a refrigerator. At 40° lights are not necessary. Use pot grown plants, for Christmas forcing; there is less chance of root disturbance and leaf drop. After storage it takes 4 to 6 weeks to bloom depending on variety in a 60° greenhouse.

A summary of treatment is:

Kurume types — give four weeks storage at 40° and four weeks in a 60° greenhouse.

Indica type — give six weeks storage at 40° and six weeks in a 60° greenhouse. A grower producing plants in a cool section of the country may find that his plants get enough cool weather in early fall so plants can be forced starting November 1 without artificial cooling.

3. **For later forcing** — Keep the plants in a 40° greenhouse with some light shade to prevent reddening of foliage and leaf drop.

**January blooming** — start EARLY varieties in a 55-60° greenhouse about December 15; two weeks later raise to 70°.

**February-March blooming** — Allow 4-5 weeks at 60° or three weeks at 70°, using MIDSEASON VARIETIES; to hold for Easter, keep plants at 40°.

**Easter blooming** — Use LATE varieties and hold at 38 — 40° until about 2 or 3 weeks before an early Easter and 10-14 days before late Easter and then give warmer temperatures if needed.

**Mother's Day blooming** — Use LATE varieties such as Pericats and the new Roehrs Hardy Types and handle the same as for Easter. Refrigerated storage may be necessary to hold them back.

**Growing on small plants** — Transplants in flats are planted in beds of peat out of doors with some trimming to maintain good shape and to induce branching and a compact bushy top. The last pinching, except for occasional long shoots, is usually done by July 1 so there is time for more growth and bud initiation during the warm days of summer. Plants for Christmas sales are grown in pots plunged in peat beds.

Fertilize once every 4 weeks using a fertilizer such as the Azalea Acid Special (page 60) at the rate of 2½ pounds per 100 gallons of water — OR use alternate applications of ammonium sulphate at the same rate alternated with 20-20-20 (2 pounds per 100 gallons). If iron chlorosis (yellow leaves with green veins) develops, water the plants with a solution of a 12% iron chelate using 4 ounces in 100 gallons of water.

Continue fertilization until mid-September. During summer months, applications may be stepped up to once every 3 weeks.

Plants can be grown all summer in pots or in plant beds, either in the greenhouse or out of doors. In cool areas, growing in the greenhouse is necessary to get warm temperatures for good bud set. Plants out of doors can be grown in full sunshine if you make sure that watering and fertilizing are not neglected. If grown under some shade (lath house or plastic netting), remove shade in early August.

Plants grown in beds should be potted in August, and grown as cool as possible in the latter part of September and October either in greenhouses or coldframes. Protect from frost. Further handling would be similar to that outlined for DORMANT AZALEAS.

Immediately after planting out of doors, spray monthly with Malathion or Parathion alternated with Chlorobenzilate for insect control. For leaf spot control, add Ferbam to the insect spray. DDT or Malathion or Lindane are good for lace bugs.

## DORMANT AZALEAS FOR FORCING

	7/8" .95 EACH

Prices quoted are on orders for 100 plants or more. Free truck delivery in metropolitan area. Longer distances at cost. Packing extra if by express. Discount on orders 1000 or more 10%.

Fall shipment to October only at above prices. Later deliveries out of storage, Nov. to Dec. subject to 10% additional; during Jan. 15%. Feb. 20% more, over fall prices on orders received prior to Sept.

**HANDLING AFTER RECEIPT OF PLANTS:** Thoroughly water rootballs and store in a light and cool, 45-50° greenhouse. Pot or plant in moist peat and never allow to dry out. For early blooming select plants with well developed buds. Forcing of CHRISTMAS varieties can begin in November at 60°, gradually increasing night temperatures to 70°, with frequent syringing to help buds to break, without blasting. EARLY varieties for January blooming start middle of December at 55-60° for 2 weeks, then increasing to 70°; MIDSEASON varieties for Feb.-March blooming allow 3 weeks at 70°; if wanted for Easter these may have to be held near 40°. Varieties marked LATE, to bring in for Easter, keep at 40° or slightly below, to keep the buds from moving, until about 3 weeks before Easter, then either apply heat, or hold back, as needed — if necessary applying shading.

**CORAL BELLE SUPREME.** New Patented. Sport of Coral Bells. Flowers twice as large as its parent. 3-4 hose in hose, semi-double and deeper pink. Early mid-season, profuse bloomer. Heavier branches than parent. Propagates easy. Subject to signed agreements.

Routed cuttings	17.50 per 100	150.00 per 1000
2 1/2"	27.50 per 100	250.00 per 1000

**FOR EASTER  
AND  
MOTHER'S DAY**

**Daphne Cneorum (Rose Daphne)**

Pot plants in good soil mix and hold  
in cold greenhouse or cold frame. Force  
in 50-55° greenhouse figuring about 8  
weeks for Easter flowering and only about  
5 weeks for Mother's Day. Keep tempera-  
tures as near 50 as possible since high-  
er temperatures give a very light pink  
color. Daphne is a garden plant which  
is satisfactory except in very cold cli-  
mate.

**DAPHNE CNEORUM**

## POINSETTIA STOCK PLANTS

1. Pot plants on arrival if possible. Do not store in refrigerator or cold shed. A 60-70° room is satisfactory. Use a soil mix of 1 part peat, 1 sand, and 1 soil with pH of 4.5 to 5.5. Mix in superphosphate at the rate of 3 pounds per cubic yard of soil. Steam the soil mix.

2. Use large containers — butter tubs, lard cans, half bushel baskets — or plant in benches. Put an inch of gravel in the bottom to insure good drainage.

3. Keep soil moist. Keep the tops of the dormant plants moist to induce "rapid" breaking of buds. A mist system does it automatically. Or put cloth or burlap over the plants until the buds grow.

4. Warm temperatures of 65-70° at night and 75-85° in the daytime make stock plants grow.

5. After 8-12 inches of growth, give the first soft pinch, and after 2 to 3 leaves form on the new breaks, give a second soft pinch. This cuts down the number of early cuttings, and increases the number of later ones.

6. To get maximum production of cuttings, allow each shoot to grow long enough so that after a cutting is taken, only two leaves remain on that shoot on the stock plant.

7. Keep stock plants well spaced because crowded plants give thin weak cuttings.

8. After growth starts, give a watering with a fertilizer solution using 25-10-10 at the rate of 3 pounds per 100 gallons of water

every two weeks until mid-June. After June 15, give weekly applications.

9. Propagation — Use 4 to 5 inch cuttings; cut between nodes or below the node. Stick in sharp sand, perlite, vermiculite or mixtures of these materials with an equal quantity of peat. Stick the cuttings 1½ to 2 inches deep and 2½ to 3 inches apart in rows with 4 to 6 inches between rows. Use light shade or better yet, use automatic mist and full sunlight. Cut down on the mist a couple days before potting. Bottom heat will speed up rooting, especially in late August and September.

Cuttings under mist can be rooted directly in peat pots if a loose soil mixture is used. Try it on a small scale until you learn how to handle the method.

Cuttings made in early July will make tall large pinched plants. Cuttings in the last half of July and the first half of August will give pinched plants for making up 7 to 9 inch pans.

Cuttings stuck the last half of August and in September make good unpinched plants. September cuttings are usually potted directly from the propagating bench into the finishing pot.

Pot cuttings as soon as roots are ¾ to 1 inch long. For early plants to be made up into pans, use 2¼ inch Jiffy pots.

10. It costs quite a bit to grow stock plants, propagate cuttings, and grow the small plants. It often is more economical to buy plants in 2¼ inch pots from SSS & Co. ready for final shifting to pans.

## POINSETTIA

When 2¼ inch plants arrive, pan them in a well prepared soil of a 1-1-1 soil-sand-peat mix with a pH of 4.5 to 5.5. Mix in superphosphate (3 pounds per cubic yard of soil) and steam sterilize. Keep soil moist after planting to avoid leaf drop.

Plants panned in August and early September are given a soft pinch (just roll out the tip) one week after potting. The pinch induces branching and keeps down plant height. Plants received after September 10 should be grown single stem.

In a 6 inch pan, use 4 plants if not pinched, and 3 plants with a pinch. In 7 inch pans, figure 5 not pinched and 4 pinched. A 5 inch pan usually has 3 unpinched plants.

When panning, put a small empty pot in the center of the

soil so you can later put in a table fern plant (page 40). Careful! Don't crease or scratch plant or rot follows.

Grow plants with a 62° minimum night temperature and 75-80° day temperature.

Cooling plants in December is dangerous because temperatures below 60° can cause leaf drop and disease troubles. If in past years your plants have been early so that pollen was being shed when sold to the consumer, consider lighting a block of plants.

Give the plants 2 hours of light (minimum intensity of 5 foot candles from 11:00 p.m. to 1:00 a.m.) starting September 20 and ending October 10. This will delay flower bud initiation and will give peak quality at time of sale to the consumer. See that street lights are shaded or blooming may be delayed or prevented.

(African Violets) 2 1/4"

Single Varieties	27.50	250.00
Double Varieties	30.00	275.00

## CHRISTMAS PLANTS

### BEGONIA — Christmas and Lady Mac

Shift the plants into 5 or 6 inch pots in a soil mix of 1/3 soil, 1/3 sand and 1/3 peat. Grow in a 58-60° greenhouse. Make last pinch in June and early July. Stake the plants with split bamboo or round wood stakes (page 59.)

Shade plants from early April to mid-September because high light intensity bleaches the leaves. Flower buds form in early October and the plants flower for Christmas sales.

Botrytis can be troublesome. Space the plants and set them on inverted pots to provide good air circulation. Also watch ventilation and temperature to prevent excessive humidity.

If mildew is a problem, spray with Karathane (3 - 4 ounces per 100 gallons plus a spreader). If plants are in bloom, wash off the spray with clear water after 30 minutes.

Insects can be controlled with monthly treatments with Malathion or Parathion or Sulfotepp.

## CYCLAMEN

When received, the plants should be shifted into the final sized pot using a fibrous soil mix, carefully steam sterilized to prevent stunt disease. Keep the corm above the surface of the soil to help prevent crown rot. Elevate plants on upturned pots for more air circulation.

Shade plants from bright sun from April 15 to September 15 and grow as cool as possible. Remove shade in fall of year or you will get weak floppy plants. Grow at 48-50° during fall of year.

Fertilize plants lightly about once every 3 weeks in summer and every month in the fall using a 20-20-20 or similar fertilizer. Keep plants spaced to provide good ventilation and maintain high quality.

About one week after potting the plants, give 3 applications of Endrin or Kelthane (See page 60) at 10 to 14 day intervals at 1:400 with extra wetting agents. If cyclamen mites have been troublesome in past years, make another treatment in late August or early September.

## FERNS

Various types are grown for use in dish gardens and plant combinations. The table ferns are excellent for "dressing up" poinsettias.

Ferns thrive best in a well drained soil, which is kept continuously moist. Some shade should be used in bright months to maintain good green color.

## PRIMULA OBCONICA

When plants are received, shift from 2 1/4 to 5 or 6 inch pots and grow as cool as possible with 45-50° night temperature as soon as possible. Fertilize regularly. Some people are allergic to the plant and develop a rash.

## SAINTPAULIA

Shift the plants from 2 1/4 to 4 inch azalea pots using a friable soil mixture of 1/3 soil, 1/3 sand and 1/3 peat.

Keep the soil moist. Since cold water causes spotting of leaves, use warm water, or water the plants from below by subirrigation. Keep at minimum temperature of 65°. Shade from bright sun so light intensity is 1000 to 1500 foot candles at brightest part of the day. Higher intensity causes light colored leaves, and less light gives few flowers.

# EASTER - MOTHER'S DAY PLANTS

## CALCEOLARIA

For Easter and Mother's Day, shift 2 1/4 inch plants to 5 or 6 inch pots and grow at 60° until about 4-4 1/2 months before desired flowering time. Then grow at 48-50°; low temperature causes flower formation and gives sturdier plants. Stake the plants to support the heavy flower heads.

## CINERARIA

Shift 2 1/4 inch plants to 5 or 6 inch pots and grow cool as possible in the fall and continue in a 48-50° greenhouse. Higher temperatures cause legginess and soft growth in winter. Be sure to steam sterilize the soil and avoid using old chrysanthemum soils because of danger of Verticillium wilt. Keep plants well watered and fertilize every 2 to 3 weeks with liquid fertilizer.

## GARDENIA

In May or June, plant three 2 1/2" plants in a 6 inch pot of 1/2 peat and 1/2 soil. Two weeks later fertilize alternately with ammonium sulphate (1 pound to 50 gallons) and 20-20-20 complete fertilizer (3/4 pound to 50 gallons) with applications every 3 weeks in summer, and 4 weeks in the fall. Use iron chelate for chlorosis.

Give last pinch about mid-July for the Christmas crop and mid-August for the spring crop. Grow at 62-64° in the fall for Christmas flowering. For the Easter crop, reduce the temperature to 58-60° for several weeks about 3-3 1/2 months before Easter, and then finish off with 2-2 1/2 months of growth at 62-65°F.

## GLOXINIA

Shift the plants from bands or pots to 5 or 6 inch azalea pots and handle as outlined on page 43.

## HYDRANGEA

**Rooted cuttings for growing on** — Pot rooted cuttings in 3 inch peat pots or bands. After 3 sets of leaves develop, remove tip leaving 2 or 3 nodes. After 3 sets of leaves are produced on side shoots, pinch again. Last pinch is usually not later than July 15, depending on geographical location.

If plants are to be grown continuously in pots, shift plants to 5 or 6 inch pots when rooted through the peat pots. If field culture is to be used, plant in rows out of doors as soon as danger of frost is past. Dig the field plants and put in final size pots the first two weeks of August.

**Bud Formation** — Hydrangeas form flower buds in early fall when temperatures become cool, i. e. nights around 60°F, and must have 6 weeks of growing with temperatures below 65°. In some northern states, hydrangeas must be grown in the greenhouse in summer to keep the plants warm enough that vegetative growth is produced up to September when flower buds are initiated by exposure to cool nights.

**Storage** — After plants have had 6-8 weeks of cool growing temperature and flower buds are well initiated, then the plants need cold dark storage (33-35°) for at least 6 weeks to cause leaf drop and maturing of the flower buds. This is usually from mid-October to December and is done in dark cold frames, storage sheds or refrigerated rooms. If mold starts in storage, spray with Captan.

Gassing with ethylene from wind fall apples to remove leaves is practiced. Use 1 bushel of apples per 400 cubic feet of storage space with 65° temperature. Then store plants cold for 6 weeks.

**Forcing** — After proper storage, the plants are grown at 60° night temperature. Figure about 3 to 3 1/2 months for Easter flowering.

**Fertilization and flower color** — Blue flower color is caused by aluminum in the plants. For good pink flowers, absorption of aluminum should be reduced as much as possible. Control color by proper fertilization. Aluminum is soluble in soils with low pH and is readily absorbed by plants. Aluminum is tied up in the soil by high amounts of phosphorus thus reducing absorption of aluminum by the plants.

For field growing have a soil pH of 5.5 to 6.0 and fertilize plants, which are to have pink flowers, with complete fertilizers such as 5-10-5 and 15-30-15. For plants to have blue flowers, use ammonium sulphate and muriate of potash or 25-0-25 low phosphorus fertilizer (page 60).

Fertilize plants grown continuously in pots, or of field plants at time of potting, as follows:

**For pink and white flowers** — use high phosphorus fertilizer such as 15-30-15 alternated with nitrate of soda. The soil pH should be 6.2 to 6.5.

**For blue flowers** — have soil pH of 4.5 to 5.0. Do not use phosphorus fertilizers. Use 25-0-25 alternately with ammonium sulphate. To supply aluminum, apply aluminum sulphate or aluminum nitrate (1 pound per 5 gallons of water) in early September and a second application after new growth starts in late December.

For iron chlorosis, use iron chelate the same as for azaleas.

Flower colors are given under the variety listing. For blue flower, select plants that react well such as Europa, Rosabelle, Kuhnert and Red Star.

**Fall delivery plants for forcing** — Soak plants when received in December or early January. Start plants at 55° for a week or two. Syringe the tops to induce new growth. Then grow at 60° night temperature. It is a general rule that flower buds will be the size of a small pea 7-8 weeks before Easter and the size of a nickel 4-5 weeks before the holiday. Stratford develops a little slower than other varieties.

If in color a week or 10 days before Easter, drop the temperature to 50-55°.

For Mother's Day, start plants in January and grow cool, or hold dormant in 33-35° storage until early February and grow at 55° through the spring. Some light shade is helpful in late April and early May when days are bright.

Watch watering carefully; especially after cloudy weather, one severe wilting can cause "burning" of the leaves.

**Mildew** — If mildew is already present, spray with Mildex or Karathane. Dusting or spraying with sulphur, along with proper ventilation, will prevent mildew. **Sulphur bleaches flowers**; do not use after blooms develop.

Control Red spider mites and aphids during summer by spraying every 7 to 10 days with Malathion or Parathion. During forcing, do not use Parathion because of danger of spots on leaves.

Hydrangea — Plant on right was given proper storage treatment before forcing. Plant on left had insufficient cold storage, needed to break dormancy.

	Jan.-June 2 1/2 inch	25.00	240.00

## GLOXINIAS

We are now prepared to ship you Gloxinia seedlings and transplants year round which will give you one of the most popular blooming plants in the industry. It requires about 75 days to produce a good seedling, it then takes 60 days more to produce a good transplant equal or better than a standard 2 1/2" pot plant. To grow a good blooming 4" standard pot or 5" azalea pot plant, 70 to 90 days are required and for a 6" azalea pot plant, 15 to 20 days longer, when grown in a 65 degree house.

After three years of careful study in the growing of various Gloxinias we have selected the following varieties for their best bud count. These varieties produced for us in our trials as high as 14-20 buds per plant in 2 1/2" standard pots and 20-40 buds in 4" standard pots and 25-50 buds in 5" azalea pots and required no staking.

**VARIETIES:** Panzer Red, Switzerland, Emp. Frederick, Rose Sensation, White (Mont Blanc) and some Emp. William.

The demand for Panzer Red is about 5 to 2 of any other variety.

Mr. Panzer's full growing directions will be enclosed with each shipment of plants.

## PRICES:

SEEDLINGS	\$12. per 100
TRANSPLANTS	\$20. per 100
	or \$180. per 1000

as good and better than 2 1/4" potted

3" potted extra heavy	\$35. per 100

# BEDDING PLANTS

Bedding plants are a good source of income. Use Jiffy pots Gro-tainers, or Tom Thumb flats so the product can be merchandised easily, and still give good consumer satisfaction.

Plant the cuttings, seedlings, or small plants in a soil mixture of 1/3 soil, 1/3 sand and 1/3 peat. Steam sterilize the mixture to eliminate weeds and possible disease. After the plants are established, start feed-ing every 2 weeks with 20-20-20 fertilizer solution using 2 pounds per 100 gallons. Keep the soil moist. Grow at 50-60° to keep plants stocky.

## AGERATUM

Plants from cuttings are much more uniform in flowering, color and habit of growth than plants from seed. Grow at 50°.

## BEGONIAS

**Bedding or Semperflorens type** — Grow at 55°. Some pinching keeps plants compact.

**Tuberous rooted begonias** — Excellent bedding plants for semi-shade spots in the garden. For culture, see page 21.

## CALADIUM

Fine for semi-shady locations in the garden. For culture, see page 21.

## CANNA

Start tubers in greenhouse in April and grow at 60° for May and June sales. If in Jiffy pots, they can be planted directly in the garden. See page 26.

## COLEUS

A "must" for combination boxes and pots, and as a garden bedding plant. Grow at 60°. Some pinching will induce branching and bushiness. Grow this item in peat pots for easy trans-planting. Best varieties are grown from cuttings.

## DUSTY MILLER

Bedding plant with silvery gray green foliage. Grow at 55-60°.

## DRACAENA

The Indivisa type has narrow slender green leaves which makes it a good plant for urns, vases, and various plant combinations. Grow at 60°.

## FUCHSIA

Attractive showy plants with unusual flowers. Grows best in partial shade. Grow at 55-60°.

## GERANIUMS

The old standby. Cuttings from SSS "cultured" stock give di-sease free plants if planted in steamed soil and kept clean. Don't grow clean stock in the same house with plants that may have disease. Plant unrooted (calloused or rooted) cuttings when they arrive "as is" shallow in Jiffy pots. After thorough soaking, grow on "dry side."

Shift the 2 1/4" plants to 4 inch pots and keep soil moist. A 60° minimum night temperature will give most rapid growth. Run-ning plants cold and with dry soil does not stimulate flowering. A good saleable 4" plant can be grown in 10 weeks at 60°, from an unrooted cutting.

Rooted cuttings can be potted as late as the latter half of March and give good 4 inch pot plants for May sales if grown at 60° minimum with a moist soil and light fertilization every 2-2 1/2 weeks.

Give good spacing to induce branching and prevent "legginess". Monthly applications of Malathion, Sulfotepp or Parathion will prevent trouble with white fly, red spider mites, and mealy bugs.

## HELIOTROPE

A very fragrant, popular bedding plant and pot plant, which is more uniform from cuttings than from seed. Grow at 60° night temperature.

## IMPATIENS

Another good bedding plant for partially shaded spots in the flower garden. Also good for borders and in combination plant-ings. Grows best at 62 to 65°. Some pinching helps shape up the plants.

## LANTANAS

A plant that likes heat. Grow in a warm house, 60-65° minimum.

## NIEREMBERGIA

Can be handled as a potted plant that the customer can plant in the garden for flowering all summer. Grow at 55-60°.

## PELARGONIUMS

The showy or fancy geranium is best grown as cool as possible because flower petals fall, or flowers do not form well, at tem-peratures above 60° at night.

## PETUNIA

Excellent for bedding. Double flowered, California Giant, and grandiflora types make excellent pot plants. Best growth at 50-55°. A 60° temperature will speed up flowering with tendency toward legginess. Keep soil moist and fertilize regularly. Running plants dry and starved slows down the flowering.

# FOLIAGE and DISH

POTHOS WILCOXII

P. PANDURAEFORME

DIEF. AMOENA

DIEF. ROEHRsii

DIEF. HOFFMANI

**GENERAL CULTURE** — Most plants are grown at 65-70° when increased in growth is desired; when simply holding plants for sale, keep temperature at 60° to 65°. A light shade in winter and heavier shade in summer is needed to prevent light green color, and dry brown spots. If kept too dark, plants become stretched and weak.

A well drained soil of 50% soil and 50% peat holds moisture without excessive watering.

**USE OF FOLIAGE PLANTS** — Foliage plants are very popular not only for home use but also for hotels, banks, restaurants, office buildings and other locations where interesting decoration is desired.

For these purposes, rapid growth is not desired. There should be just enough moisture and fertilization to keep the plants in good color without stimulation of growth.

Some light is needed to keep plants alive. Incandescent and fluorescent light in buildings may supplement natural light or may provide the entire light supply for foliage plants since many will survive well under low light intensity if given for a long enough period. Information is available on the length of time that foliage plants remain in satisfactory condition with various low light conditions. (15 to 25 foot candles).

Most foliage plants grow well under medium light conditions. 25 to 50 foot candles. High light 50 to 100 foot candles. Those which will tolerate low light would be better with medium or high light. Some plants have specific uses or attributes which are indicated by the following key:

A—For adverse light conditions.

D—Good for dish gardens.

S—For dry situations with poor light.

W—Will grow in water.

(A,D) **ACUBA JAPONICA** — Green foliage speckled with yellow spots.

(A,S,D,W) **AGLAOMENA** — (Chinese Evergreen) grows in water or soil. *A. simplex* is green; *A. commutatum* is variegated.

**APHELANDRA** — A flowering plant with veinings on green leaves. Yellow waxy flower. Blooms in summer. Rapid grower.

(D) **ALUMINUM PLANT** (*Pilea Cadieri*) — New dwarf type, self branching, dense and compact, also bronze and silver types.

**ARALIA SIEBOLDI**

(A) **ARAUCARIA EXCELSA** (Norfolk Island Pine) — Slow growing upright plant.

(D) **BOXWOOD**

(D,S) **CACTI** — grow in rather sandy soil, kept on the dry side, and 60-65° temperature.

(A,S,D,W) **CHINESE EVERGREEN** — See Aglaomena.

**CHRISTMAS CACTUS** — (*Zygocactus*) — Should be grown cool for flowering. Temperatures of 70° in homes prevent flowering.

**CISSUS ANTARTICA** (Kangaroo Vine) — Excellent vine-like plant that survives with poor light.

**CISSUS RHOMBIFOLIA** (GRAPE IVY) — A good vine type plant for home use, where light may be poor.

(A,D) **CRASSULA ARBORESCENS** (Jade plant) will withstand adverse home conditions. Comes with green leaves and also variegated.

**CROTON** — Often drop leaves under the adverse low humidity conditions of a home.

(S,D) **CRYPTANTHUS TRI-COLOR** (Rainbow plant) — A bromeliad related to pineapple.

**DICHORISANDRA REGINAE** — Stiffly erect plant with waxy long pointed leaves, dark green, with deep purple on underside.

(A,D,W) **DIEFFENBACHIA** (Dumb Cane) — *D. amoena* and *D. picta* survive with low light conditions.

*Roehrsii* should have medium light. *D. Hoffmannii* and *Exotica* are newer highly colored varieties excellent for medium light conditions.

**DRACAENA** — Excellent as specimens in dish gardens and planters.

*Eugene Andre* — Red leaved.

*godseffiana* — glossy leaves, spotted creamy yellow white

*Massangeana* — an excellent foliage plant even under low to medium light. Has arching green leaves with yellowish green stripe along middle of leaf.

(A,D) **Sanderiana** (Ribbon Plant) — More upright smaller leaved type. Leaves green with white edges.

(A,D) **warnecki** (*deremensis*) — green leaves with white stripes.

**FATSHEDERA LIZEI** — An upright plant with large ivy like leaves. Green, and variegated.

**FERNS** —

**FICUS** — Excellent as specimens and in planters. Best with fairly good light.

*decora* — Dark glossy green leaves similar to common rubber plant but larger and more striking.

*doescheri* — Variegated with white and creamy yellow.

*elastica* — Common rubber plant — Large green leaves.

*pandurata* — Fiddle leaf fig — Attractive decorative specimen plant.

(D) **FITTONIA ARGYRANEURA** — A vine-like or low growing plant with green leaves with silvery white veins. Good for terrariums and dish gardens.

PEP. OBTUSIFOLIA  
VARIEGATED

DIEF. EXOTICA

# GARDEN PLANTS

(D) **GEOGENANTHUS UNDATA** (Seersucker plant) — Compact low growing, with dark green quilted leaves, reddish beneath.  
**IVIES** — English Ivy types

(D) **LIGUSTRUM LUCIDUM** (privet) —

(D) **MARANTA KERCHOVEANA** (Prayer plant) — Grows best with 65° and light intensity of about 2000 foot candles.

(D) **OSMANTHUS AQUIFOLIUM** —

(A,D,W) **NEPHTHYTIS** (Syngonium) — Tends to be vine-like after vigorous growth starts.  
**Emerald Gem** — green, arrowhead shaped leaves; stays short.  
**Green Gold** — variegated

**Imperial white**

**Liberica** — trailing plant, with arrow head shaped leaves.

(D) **PACHYSANDRA** — Silver edged.

(A,D) **PALMS**, **Neanthe Bella** (Small Palm) — Grows well even in low light.

(D) **PEPEROMIA** — Excellent and medium light situations.

**dwarf**, New strain — Green. Stays dwarf and branches freely.

**fosteriana** — Attractive vine type with thick green leaves along reddish stems.

**obtusifolia** — Standard fleshy green leaved peperomia for dish gardens.

**obtusifolia variegated** — Yellow variegations.

**pericata** — Upright plant with bright green leaves and reddish petioles.

**Emerald Ripple** — Small dark green leaf with a decided crinkle.

**Royal Gold** — Variegated type

**sandersii** (Watermelon peperomia) Green and gray striped leaves.

(A,W) **PHILODENDRON CORDATUM** (Oxycardium) — A vine-type plant.

**PHILODENDRON MICANS** — A similar type with velvety reddish green leaves. Doesn't grow as well in poor light as does cordatum.

**PHILODENDRON** — **LARGE LEAF VARIETIES**

A popular item for planters and as specimen foliage plants.

**dubium** — has medium light requirement.

(A) **hastatum** — the large arrow shaped glossy green leaves with rounded lobes make this a favorite.

**imbe** — similar to hastatum but has pointed lobes, and some reddish color on lower side of veins and on petioles.

**Mandaianum** — a hybrid with glossy arrow shaped leaves and purplish-red stems.

(A) **panduraeforme** — unusual fiddle leaf type with 3 lobed foliage.

(A) **pertusum** (Cut leaf philodendron)

—large round perforated leaves.

**Monstera deliciosa** — cut leaf type similar to pertusum but generally larger leaves.

**PILEA CADIERI** — See aluminum plant.

(D,W) **POTHOS** (Scindapsus aureus) Requires lower humidity than Philodendron.

**Wilcoxii** — light green leaves with yellow blotches or streaks. Has medium light requirement.

**Marble Queen** — similar but blotches are lighter.

**RUELLIA MIKOYANA** — Trailing velvet plant.

**SANSEVIERIA** — This group will withstand adverse light and moisture conditions.

(A,D) **Hahnii** — true dwarf, compact, rosette type. Excellent in dish gardens.

(A,D) **Golden Hahnii** — cream to golden colored bands along edge of leaves.

(A,D) **Silver Hahnii** — leaves are a pale silvery green.

(A,S,D) **zeylanica** — (Snake plant) taller growing plant with long sword-like upright green marbled leaves.

(A,S,D) **laurentii** — similar to zeylanica except that it has yellow bands along the sides of the leaves.

(A,D) **SCHEFFLERA** (Umbrella Tree) — A fairly large plant for specimens; small plants good for dish gardens. Has glossy umbrella shaped leaves.

**SEERSUCKER** — See Geogenanthus.

(W) **SPATHIPHYLLUM** — Dark green foliage. Grown mainly as a foliage plant, but has white waxy spathe-like flowers. Grows best with indirect sunlight.

(D) **SUCCULENTS**

**SYNGONIUM** — See Nephthytis

**VITIS RHOMBIFOLIA** — See Cissus.

**IVIES**

**Hedera** — English Ivy Types and  
**Vitis rhombifolia** (Grape Ivy)

All grow well in good soil with a medium nutrient level, a good moisture supply, 60° minimum temperature, and light shade in bright weather.

Small plants are excellent in combinations. Larger plants make nice potted foliage material. Scale insects can be a problem and are controlled by Sulfotepp.

**SUCCULENTS AND CACTI**

Very useful as small sales items, and in dish gardens. Usually grown in rather sandy soil, kept on the "dry side" and a 60-65° temperature with full sunlight.

<b>Hagenburger's Variegated</b> (516) .....	\$7.00	\$65.00
<b>Golddust,</b> yellow variegated, smalleaved .....	8.00	75.00
<b>Glacier,</b> highly variegated white, smalleaved .....	8.00	75.00
<b>Green California,</b> sturdy branching, smalleaved .....	6.00	55.00
<b>Green Fan,</b> hard, spread like a fan .....	7.00	65.00
<b>Hahn's Selfbranching,</b> smalleaved green .....	5.00	45.00
<b>Jubilee,</b> miniature white variegated .....	12.50	.....
<b>Ivies, assorted varieties</b> .....	7.00	65.00
<b>LIGUSTRUM lucidum,</b> wax leaf, good keeper .....	7.00	65.00
<b>MYRSINE africana</b> (as available) .....	7.00	.....
<b>PEPEROMIA obtusifolia,</b> green .....	8.00	.....
<b>PHILODENDRON cordatum</b> (512). rooted cuttings ....	7.00	65.00
<b>PITTIOSPORUM tobira,</b> leaves long, shiny green .....	7.00	65.00

# JIFFY-POTS

ROOTS GROW RIGHT THROUGH POT WALLS

To establish young plants when tight schedules do not permit direct benching, use nutrient treated Jiffy-Pots. These pots are molded from 75 per cent peat and 25 per cent wood pulp, and contain 1.3 per cent Nitrogen, 1 per cent Phosphoric Acid and 1.6 per cent Potash. They are weed disease free.

Plants grow faster and make more vigorous and rapid growth than plants grown in other types of containers. Nutrient treated Peat Pots dry out slower than clay pots, therefore require less frequent watering. Because the roots penetrate the wall of the nutrient treated Peat Pot, there is no knocking out, thereby saving time and labor.

## PRICES FOR NUTRIENT TREATED PEAT POTS

### No. 115. 1 1/2-in. Round.

## LINDIG SOIL SHREDDERS

The new Model B with the ACTIONIZED shredding blades is the product of several years actual testing in the field and is the finest shredder to be found on the market.

The Model B is designed for the speedy, thorough, perfect shredding of soil, peat, manure, compost piles, leaf mold, sphagnum moss, shingle tow and sods; also for mixing soil with manure, commercial fertilizer, etc. The Model B will shred five to six times as much soil as could be screened by hand in a given time. All the valuable manure and other humus are retained, assuring you better soil conditions at all times. Stronger plant growth and greater profits are yours with powered shredding.

**Model JR-B.** For the small grower or as a second shredder for the large grower to use on the potting bench. Height 27 ins., length 36 ins. Hopper size, 15 x 15 ins. Rotor 7 ins. wide with 3 sets of blades.

Without power ..... \$110.00  
With 1/2 h.p. motor ..... 160.00  
With 1 1/2 h.p. Gas Engine & Clutch ..... 160.00

Following are 36" high and 46" over-all.

**Model No. 1B-4.** Feeder hopper size, 16 x 18 ins. Beater drum, 8 1/2 ins. wide, with four rows of teeth. **Without motor.** ..... 152.00

**Model No. 1B-6.** Same as Model No. 1A, except that beater drum has six rows of teeth. Designed for extra-fine shredding.  
**Without motor** ..... 162.00

**Model No. 2B-6.** Feeder hopper size, 16 x 20 ins. Beater drum 19 1/2 ins. wide with six rows of teeth. **Without motor** ..... 182.00

**Model No. 2B-8.** Same as Model No. 2-A, except beater drum has eight rows of teeth. Designed for extra-fine shredding.

**Without motor** ..... 192.00

3 1/2 in. Copper Wired	
1000 per package	4.50

## TWIST LOCK HOSE COUPLERS

Saves labor, time and Tempers. Cannot come apart or leak. All Bronze. Precision made. Unconditional guarantee.

Per Set — \$2.20 Each

Additional faucet connections —.50 Ea.

## "GRO-HOSE"

Polyethylene watering tubes with holes spaced 8" apart. Waters the full length and width of your benches automatically.

1-1000 ft. ....	9 1/2c. ft.	1001-5000 ft. ....	8 1/2c. ft.
		Over 5,000 ft. ....	7 1/2c. ft.

## GRO HOSE HEADERS

Two way	4.00	Four way	4.75
		Six way	6.00

CANVAS Sterilizing Hose. The perfect steam conductor when sterilizing. 18c. foot

## WOOD PRESERVATIVES

Cuprinol #10 — Insects and fungi just don't go in wood treated with Cuprinol. This excellent wood preserver is harmless to plants. One gallon covers 400 sq. ft.

5 gal. ....	22.00	50 gal. ....	189.00
-------------	-------	--------------	--------

## Cuprinol for Florists for Dipping #14.

5 gal. ....	14.25	50 gal. ....	119.25
		20 gal. or more shipped prepaid.	

## HOSE

Plastic— Resinite Gold stripe 3/4" x 50'

17.95 Ea. 4 or more 16.50 each

Rubber— 2 ply rayon cord. Black 3/4" x 50'

12.75 each 5 or more 11.00 each  
5/8" x 50' 9.00 each 5 or more 7.50 each

## NEW PLASTIC HOSE

Feather-weight, full 3/4" diameter. Stays completely pliable and regardless of the temperature of water. So rugged that the abuse generally given hoses does not affect it. Used on Water Robots with complete satisfaction.

50 ft. for 17.40

100 ft. for 33.90 with extra large couplings

## BLACK CLOTH

Two standard grades to choose from. Tested and approved by commercial growers and experiment stations for inside and outside shading.

Furnished in 36" widths or sewed into wide sheets in multiples of 18" to specifications.

No. 258 ..... .74 sq. yd.

No. 575 ..... .67 sq. yd.

## STERILIZING COVER

A lightweight gas tight cover made of green Monsanto velon plastic for steam sterilizing, soil fumigating, water proofing, etc.

HEAVY DUTY VINYL (OLIVE DRAB) 8 MIL

6-2/3 ft. x 100 ft. (seamless) 38.50 roll

6-2/3 ft. x 150 ft. (seamless) 58.00 roll

10 ft. x 100 ft. 77.50 roll

Black Mulch 1 1/2 Mil 3' x 1000' 22.00 roll

4' x 1000' 28.00 roll

POLYETHYLENE. (For plastic greenhouses)

2 mil-clear 6-2/3 ft. x 300 ft.

1 to 5 rolls 22.00 roll

6 or more 20.00 roll

## M-SCOPE MOISTURE COMPARATOR

Know EXACTLY When to Water Plants!

Extremely simple to operate. No controls to adjust. The indicating meter scale is divided into three sections "DRY" "MOIST" and "WET" with corresponding colors red, yellow and green. When the probe is inserted into the soil the meter will directly show the moisture conditions existing at the probe tip.

PRICE 12.00 POSTPAID

## SOIL FUMIGATION

**PESTMASTER SOIL FUMIGANT** or **DOW-FUME MC-2** (each contains 98% methyl bromide with 2% chloropicrin added). For control of weeds, diseases, nematodes and other soil pests in seed beds and local areas.

In lb. cans

6 LBS.—**6.50** 12 LBS.—**12.00** 24 LBS.—**21.50**

**Jiffy Applicator.** For applying Pestmaster soil fumigant or Dowfume MC-2. Complete with 10 foot saran plastic hose **\$4.00**.

Extra 10 foot Saran Plastic hose **1.50** each

### VAPAS-45 SOIL FUMIGANT

Per gal.

1 Gal. .... **4.90**

5 Gal. .... **22.00**

## GREENHOUSE FUMIGANTS

### PLANTFUME 15% DITHIO 103 SMOKE GENERATORS

Controls two spotted spider mite, aphids, thrips, etc.

5,000 cu. ft. generator ..... **\$12.00** ctn. of 36

20,000 cu. ft. generator ..... **\$12.00** ctn. of 12
